Wang joins the long march into micro market

by Robert Parry
WANG has joined the relentless march of mini and mainframe makers into the micro market. Like the IBM Personal Computer - which legitimised the micro for computing's big boys - and recent products from DEC and Burroughs, Wang's new Professional Computer uses the Intel 16-bit family. It runs the MS-DOS operating system, on an 8086 chip with 128K memory expandable to 256K. It offers floppy or hard discs and will also have a CPM emulation option to run 8-bit application software. But Wang is looking to more than just standalone computers for businessmen's desks. Its new machine will plug into its existing office automation products to act as a workstation for 2200 and Virtual Storage mini systems, and for

OLISA... "8-bit CPM compatibility is a stopgap."

Office Information System and Alliance shared logic word processing systems. The Professional Computer will not be available before the end of this year in the UK, says marketing manager Ken Olisa. When it does come it will sell for about £2,000 in its most basic form, but a more realistic system for DP professionals will sell at about £6,500. For this the user will get 256K RAM and five megabytes of Winchester disc, a monochrome graphics display, and software including MS-DOS, a Wang word processing package and the Multiplan financial spreadsheet package. Plug-in boards for CPM emulation and connection into the other office automation systems will come later still. The provision of 8-bit CPM compatibility is seen by Olisa as a stopgap measure to some extent. Shortage of 16-bit application software is still a limit to user acceptance, though the growing numbers of machines launched are fuelling software activity. It will also provide a growth path for current Wang users - CPM run on the Wangwriter word processing system. Wang is up against strong competition for the high performance micro market. The IBM Personal Computer sells through unofficial importers for only £3,000. The ACT Sirius 1, similarly an 8088-based machine, costs about £2,400, which is where the DEC Rainbow personal computer sits in. DEC's other new micros, the Professional 325 and 350, will sell for between £2,500 and £3,300. Olisa expects the Wang to be sold through third party distributors for between £2,500 and £3,000 as a standalone machine.

Braniff 'victim of sabotage' claim

by Howard Karten
THE US Department of Justice is investigating charges that manipulations of computerised reservation systems may have played a part in the recent collapse of Braniff International Airlines. The Texas-based carrier, which in recent months has been in financial trouble, last week filed for bankruptcy. The DOJ investigations follow a separate Federal Grand Jury investigation of charges made by Braniff. Braniff used two separate airline reservation systems - one run on its own computers, and another which it obtained from American Airlines. Sam Coates, senior vice-president for Braniff, last week charged that American had carried out a "highly professional sabotage" effort against Braniff. Among the charges are that American Airlines, via its Sabre reservations system, failed to display some schedules for Braniff flights on visual display terminals used by travel agents, in booking flights; that American deliberately changed some reservations from Braniff flights to those on American; and that American may have engaged in other unsavoury activities. Coates has declined to elaborate on the charges, while American has denied them. Several major US airlines run their own reservation systems, and in addition serve as "hosts", selling the service to smaller airlines. In addition, many such systems are tied together for inter-airline message traffic via a Maryland company called Arinc. Many airlines use as a core system a reservation package sold by IBM. This type of rough and tumble, which sometimes verges on illegal activities, is not unknown in American business. But the charges made by Braniff remain to be proven.

Users don't like Sitpro change proposals

by Donald Kennett
CONFUSION has been growing over a proposed standard for the exchange of data between organisations that most data processing departments haven't even heard about. The proposal, called Dial (data interchange at the application level), is being developed by the OIS-14 committee of the British Standards Institution. It is based almost entirely on the work done by Sitpro, the quango set up to simplify international trade procedures, which resulted in a published specification in 1978 and a software package to support it 18 months ago. But the "almost" is where the problem arises. Users of the Sitpro system would naturally be reluctant to make unnecessary changes to their implementations and

would be happy if the Dial committee just put its stamp on the system as it is. The Dial committee agrees that unnecessary changes should be avoided. But chairman Ray Walker says that for the long term a small number of changes are necessary to make the system more generally applicable. The Sitpro system is suitable for large organisations exchanging large amounts of data in trading applications. A joint statement from Sitpro and the British Standards Institution says that the cores of both systems are identical and differences in the extensions can be overcome either by implementing additional functions to control the choices or by avoiding the use of some of the options.

Deliveries profit NEC, Fujitsu

by Kevin Cahill
TWO of Japan's key computer companies, Nippon Electric and Fujitsu, have recently revealed big profit increases for the year ended March 31, 1982. Deliveries of completed computer systems accounted for much of the improved profits, according to both companies. Fujitsu pushed its pre-tax profit up by 54%, to £118 million on turnover of £1.58 billion. According to the company, 66.8% of the profit contribution came from the sale of computers, which rose by 17.4%. Overseas sales of all Fujitsu products rose by 84.2%, and much of the good profit performance comes from sales to Siemens of West Germany and Amdahl in the United States.

Plessey has plenty of cash

by Kevin Cahill
VERY much in line with the latest predictions from stockbroking analysts, Plessey pushed profits up 32% through the £100 million barrier to close the year at £111 million. Turnover rose to £963 million but the figure which attracted most attention was the cash balance of £237 million. Last year Plessey had around £62 million in short-term cash, about in line with the needs of a company of its size. Constant speculation has centred on the idea of a bid for Ferranti, when 50% of that company's shares are released from the covenant restricting their sale in August. But Plessey's chairman, Sir John Clark, refused to be drawn on the subject.

Wealth of comms for Decnet

by Donald Kennett
SUPPORT for Ethernet and gateways to IBM's SNA network architecture are included in the rash of communications products Digital Equipment has said it will introduce over the next three years. Phase IV of Decnet is designed to give DEC users the widest selection of communications protocols in the industry. The company already supports the X25 international packet switching standard and its own DDCMP digital data communications message protocol. The first products in the programme are the £185 M4000 Ethernet transceiver and the cables for the network. They are to be available by the end of the year. Users will have until the middle of next year to install their networks before the first DEC network attachments arrive. Gateways to SNA and other networks and between Decnets will be based on a small PDP-11 with software to provide network management facilities. It will also support interactive 3270-computer links.

The French Ministry of Industry's answer to Olivetti proposals, expected before the summer. Olivetti also plans to hand over to Logabax the manufacture of Italian designed products. In the framework of this expansion drive Logabax's research and development teams will be expanded from their present total of 80 to 110. Olivetti said these ventures should enable Logabax to balance its books this year after making a loss of FF100 million (£10 million) in the early months of 1981, before the Italian firm became the dominant partner. Thanks to an immediate revival under Italian management, Logabax finished last year with a loss of only FF4 million (£800,000).

Olivetti to 'increase' Logabax workforce

by Jack Gee
OLIVETTI France has insisted on denial that it plans to dismantle or reduce staff at Logabax, the French peripheral manufacturer in which the Italian firm holds a 65% controlling stake. It promises ambitious plans to make it a developing and profitable venture. The denial answered allegations by French trade unions that Olivetti intends to take control of Logabax's commercial, after and export operations. This would confine Logabax's activities to production, and would mean a staff of 500 from the present of 1,000, the unions said. Olivetti France replied that from reducing the workforce, plans to raise it to 1,400 by 1985 and has submitted plans to this objective in a document drafted for the Ministry of Industry's department for data processing and electronics. One year ago Logabax announced that it was going liquidation, but it was then bought out by the government. The operation continued trading as usual. The optimism of Olivetti France is based on the renewal of the Logabax product range, which is regarded as being at the end of its useful life. Olivetti says it intends to transfer Logabax with development of 32-bit microcomputer and a new line printer, designed for connection to France's Minitel electronic telephone directory terminal. Other future products include microcomputer, of which 100,000 units a year are planned. These will be designed for the mass market with special emphasis on educational applications. The French Ministry of Industry's answer to Olivetti proposals, expected before the summer. Olivetti also plans to hand over to Logabax the manufacture of Italian designed products. In the framework of this expansion drive Logabax's research and development teams will be expanded from their present total of 80 to 110. Olivetti said these ventures should enable Logabax to balance its books this year after making a loss of FF100 million (£10 million) in the early months of 1981, before the Italian firm became the dominant partner. Thanks to an immediate revival under Italian management, Logabax finished last year with a loss of only FF4 million (£800,000).

Back in profit for the second quarter

ICL on course for survival

by Kevin Pearson
ICL's survival plan is on course. The UK's largest computer manufacturer at last returned to profitability in the second quarter of its present financial year, and chairman Christopher Laidlaw repeated previous assertions that the company will show a profit for the full year. The denial answered allegations by French trade unions that Olivetti intends to take control of Logabax's commercial, after and export operations. This would confine Logabax's activities to production, and would mean a staff of 500 from the present of 1,000, the unions said. Olivetti France replied that from reducing the workforce, plans to raise it to 1,400 by 1985 and has submitted plans to this objective in a document drafted for the Ministry of Industry's department for data processing and electronics. One year ago Logabax announced that it was going liquidation, but it was then bought out by the government. The operation continued trading as usual. The optimism of Olivetti France is based on the renewal of the Logabax product range, which is regarded as being at the end of its useful life. Olivetti says it intends to transfer Logabax with development of 32-bit microcomputer and a new line printer, designed for connection to France's Minitel electronic telephone directory terminal. Other future products include microcomputer, of which 100,000 units a year are planned. These will be designed for the mass market with special emphasis on educational applications. The French Ministry of Industry's answer to Olivetti proposals, expected before the summer. Olivetti also plans to hand over to Logabax the manufacture of Italian designed products. In the framework of this expansion drive Logabax's research and development teams will be expanded from their present total of 80 to 110. Olivetti said these ventures should enable Logabax to balance its books this year after making a loss of FF100 million (£10 million) in the early months of 1981, before the Italian firm became the dominant partner. Thanks to an immediate revival under Italian management, Logabax finished last year with a loss of only FF4 million (£800,000).

LAIDLAW (right) ... "Company will show a profit for full year." With him is managing director Robb Wilmot.

UK firm's breakthrough into Fifth Generation

by Claire Gooding
A TINY new British company is taking a short cut past current Artificial Intelligence techniques to generate programs straight from logic. The theory could mean a breakthrough for Fifth Generation machines. Computer Research Systems, known as Cores, is using a theory based on "Natural Logic" called Multiple Objective Boolean System Mobs. According to Cores, Mobs can communicate directly in natural human logic, without using either symbolic programming languages or the "Natural Language" techniques which have absorbed so much AI effort in the past. The formulator of the theory is Dr Faridun Hilmi, who developed the Natural Logic technique during a long academic career at Cardiff and City Universities. "It's not easy to explain as really there is no comparison with anything that's already available" said Hilmi. "It's all intentions and purposes it's an AI processor. You can structure models without programming them, to as many different levels of relationship that are needed." Mobs works by building a model or logical network, with relationships indicated by pointers. This network is expandable, allowing new structures to be added and "learning" about its environment as the knowledge base is increased. The structure is "filled" with the basic items of the formula or application, and the system is then generated with a single command: "Like a very, very, high level language" said Hilmi. A commercial product, called Prelude, has already been developed from Mobs, primarily for business applications. It is being sold on a bureau basis or as a complete system for software houses wishing to make use of systems generation, for £20,000. However Hilmi sees Mobs as having further significance in the areas of Artificial Intelligence, digital and analogue system design, and robotics. He is hanging on to the results of his years of research because he feels that it will solve one of the most pressing problems of the Fifth Generation systems. "Mobs deals with fundamentals and basics of logic - it explains the function of thinking, not language. This is the key to the Fifth Generation."

NEWS BRIEF

'Uncontrolled' introduction of technology

A REPORT released today (Thursday) by white collar union APEX says the introduction of new technology is happening on a large scale in an "uncontrolled fashion". The report is based on a survey last year of 30,000 APEX members in London and the Home Counties.

Cellular service

AMERICAN Telephone & Telegraph has applied for official approval to set up cellular radio manufacturing and service companies with a total of \$26 million assets and a budget of \$28 million next year. Mobile telecommunications services based on the cellular technique would be set up in 35 major cities within five years.

First-time finance

THE Computer Weekly/Bancels Bank conference for computer entrepreneurs seeking first time finance, opens next Thursday (June 17). Speakers will include senior figures from Bancels, finance institutions and computer companies. The conference will be at the Kensington Close Hotel in London, and there is still time to book places. Details from Sue Bonnell, IPC Conferences, on 01-643 8040 or clip coupon, page 10.

Union fights

POST Office Engineering Union has three important fights on its hands, general secretary Bryan Stanley said at the union's national conference at Blackpool this week. It must fight British Telecom management's new aggressive attitude in negotiations, the government's efforts to increase competition and private ownership in telecommunications, and stagnation in the union's own structure.

IBM gives a preview of System 36

by Boris Sedacca
WITH the threat of anti-trust action behind it, IBM has resumed the practice of pre-announcing products before launching them on the market. Last week IBM pre-announced System 36, a small business computer which plugs the gap between System 34 and the advanced architecture System 38. A select group of data processing managers in the US who are large-scale users of System 34 - running about 50 machines each in their organisations - were given the preview. The machine is expected to be delivered in September. Mike Newman, managing director of Interactive Database Systems, which specialises in System 38 software development, believes the price will start at £45,000 and extend to over £100,000. The machine will have one Mbyte of memory, a 200 nanosecond processor compared with 600 nanoseconds on the System 34, 768 Mbytes of disc storage (roughly three times that of System 34), and increased channel width of four bytes against two bytes on System 34. The operating system will be fully compatible with that on System 34. System software elements from System 38 such as database management and the new RPGIII language will not be offered, although multiple indexing on index files and RPGIII-type commands will be available. According to IBM, future operating system releases will incorporate more System 38 functions.

Micros in the surgery row

A DEPARTMENT of Industry scheme was announced this week which involves 150 micros for general practitioners and 20 micros and two minis for Family Practitioner Committees. The DoI will subsidise installation and maintenance by up to £2 1/2 million. But only two of the dozen companies in the market have been chosen by the DoI - CAP and Basingstoke-based British Medical Data Systems. Each will supply 75 British built systems to GPs, with first installations in September. Tim Benson, chairman of the General Practice Computer Suppliers Association, sees it as a bad scheme. "It's grossly unfair. Some companies will undoubtedly drop out and it will freeze development."

Hitachi moves into UK business micro market

by Robert Parry
JAPANESE industrial giant Hitachi is entering the UK microcomputer market, with emphasis on business systems.

Hitachi has chosen the UK to be the first country outside Japan where it will sell its 16-bit micro, although it will not appear here until early next year.

While a major manufacturer of chips, computers and video monitors - Hitachi claims to supply 30% of monitors worldwide and that 30% of the world's micros rely on its technology - the company is best known in the UK for its consumer electronic products. The same company that sells these products, Hitachi Sales (UK), will look after the microcomputer pro-

ducts, working through a network of about 100 dealers which is being set up under a computer products division headed by Ted Marshall.

The spearhead of Hitachi's attack on the UK market will be its 16-bit machine. Built much in the IBM model - an 8088-based machine running under MS-DOS and aimed primarily at the business user - it has been sold in Japan since last September and makes its first appearance outside Japan at this week's National Computer Conference in Houston.

But the UK will be its first foreign market, says Marshall, who is convinced it will become a major force on the UK micro scene. He is backed in this by Hitachi sales marketing director

Stan Fenner, who sees microcomputing in the UK as "our next major sector of expansion."

The machine will sell for less than £3,000, with RAM expandable from 64K and high resolution display capabilities in 16 colours. It will have Basic, Cobol, Fortran and Pascal as well as assembler for programming.

Part of the reason for the delay in introduction is the continuing shortage of purpose-written programs for the current crop of 16-bit machines.

"We have no intention of releasing the machine on to the market until we have a good range of application software - and until dealers have been trained," says Marshall.

SALES BRIEF

Fisons buys HiNet local area network

FISONS, the horticultural and pharmaceutical company, has installed a 500 Kbit-per-second HiNet local area network made by Exact's California-based subsidiary Digital Microsystems. The network, which was supplied by Solven Systems of Wilham Essex, will be used to provide CP/M-based processing facilities to the 10 workstations attached.

By the end of the year, Fisons plans to have 20 of the permissible maximum of 32 workstations attached to it.

Mascot for SPL

SPL INTERNATIONAL has followed up its design study for the Admiralty Surface Weapons Establishment by winning the contract to develop a Mascot (Modular Approach to Software Construction Operation and Test) pre-processor. The pre-processor will extend Coral 66, the language the MoD has standardised on, to provide the features used in building Mascot-based systems.

Into Gaelic

LUCAS Electrical has ordered a Compeds Gaelic integrated circuit design system for its Mere Green semiconductor factory. The system will be supplied with a Prime 150 mini, two workstations and two plotters under a turnkey contract worth over £170,000. Lucas' research centre has used a Gaelic system for three years.

Army order

ROYAL Army Pay Corps has completed acceptance trials on a 8,000 line-per-minute Honeywell PPS non-impact printer and has ordered a second to be installed next April.

Case tackles user worries on local nets

by Donald Keoett
USER anxieties about local data networks are being tackled by UK networks are being tackled by UK

data communications manufacturer Case. It has combined a speech-plus-data technology with a data switch based on its DCX range of wide area network switches and multiplexers to build a system - called Grapevine - which uses existing telephone extension wiring but keeps data switching separate from voice switching.

"It gives users quick and easy terminal connections without mucking up their decor," said Case chairman Duncan Fitzwilliams.

Product planning director Derek Laval, one of the company's founders, added: "The wiring problem is the one that obsesses people most. But it is not enough to address that problem on its own, so Grapevine provides a high degree of connectivity. Nobody else has that combination, nor does

anyone else have a local system integrated into wide area network."

The connectivity provided by Grapevine includes user-to-user call selection as well as computer port contention with bunting and queuing. A Grapevine switch can start with a capacity of eight channels and build up four at a time to a maximum of 240 channels. It can then be connected via a composite link in a DCX network to another 240-channel unit.

Outside connections can be set up through a Case MSX message switch to the public telex network. An enhancement on the way for the MSX will allow dialled connections to be made automatically over the telephone network. Access to X25 packet switched networks such as British Telecom's Switchstream One is available through DCX system gateways.

Like DCX, Grapevine is based on the Texas Instruments 9900 16-

FITZWILLIAMS... Quick and easy.

bit microprocessor. In a fully-configured 240-channel unit there will be 70 of them working together.

The speech-plus-data modules, which are made by Telone in the US, are claimed to be the first to gain British Telecom approval for operation on telephone extensions. Because they are not limited by the bandwidth of the public telephone network, they can support full duplex asynchronous transmission at up to 9,600 bits per second, com-

pared with a maximum of 1,200 bps for equivalent public network devices.

Prices start at £5,000 for an eight channel switch, which rises to £9,000 when fully configured with speech-plus-data units and gateways. A 32-channel switch costs £20,000. The speech-plus-data unit plugs in between the telephone and the wall socket at the terminal end and can be unplugged for line testing.

France withholds US technology for Soviet-made micros

by Jack Gee
FRANCE has jeopardised a major contract with the Soviet Union by refusing to deliver equipment for making American-designed microprocessors in a Russian factory.

French officials declined to identify the US firm involved in the venture which concerns Thomson-CSF MT 20 time-division telephone exchanges. The factory was due to be opened at Oufa next year.

The row between the French and the Russians became public knowledge after a government delegation from Paris told its Soviet partners at a Joint Trade Commission meeting in Moscow that the US technology could not be delivered.

The French explained that the microprocessor know-how was subject to an American embargo imposed on exports of sensitive equipment to East European Communist states.

The embargo was imposed after the Army seized power in Poland last year.

In an attempt to appease the Russians, France is offering to supply the computer components itself, or to deliver French instead of American microprocessor technology.

The French Ministry of Industry said the Soviet contract, which was signed in 1979 by President Giscard d'Estaing's government, did not conform with French commitments to COCOM, the NATO-sponsored organisation which co-ordinates efforts by Western countries and Japan to prevent the Communist powers obtaining access to advanced military information.

President Francois Mitterrand has been increasingly insistent on the COCOM arrangements, in contrast with the flexible attitude of Giscard's officials.

Last year Mitterrand imposed a delay of six weeks before approving a 1.8 billion francs (£180 million) contract for the sale by Thomson-CSF of electronic equipment for the 3,000-mile Soviet natural gas pipeline from Siberia to Western Europe.

Auditors attack data protection plans

by Boris Sedacca
THE government's White Paper on data protection has attracted fresh criticism from a professional body.

In a formal response to the government's request for comments on its proposals, the Institute of Internal Auditors in the UK stated: "It is a matter for considerable regret that the White Paper is so indecisive and hesitant and fails

to consolidate on the discussions of the last year.

"What may be an attempt to offer flexibility results in confusion and uncertainty and a regrettable lack of leadership. By and large the articles of the Convention of the Council of Europe have been included in the proposals in the White Paper: clear, precise wording has in some cases been altered and convoluted in such a

way that confusion and uncertainty results."

The IIA goes on to say that sanctions are quite unacceptable in their proposed form, that no provision has been made for data subjects to resolve differences out of court, and that the piecemeal and qualified treatment given to special cases and exceptions must exacerbate the contentiousness of the topic.

BP in-house system to be sold outside

by Maggie McLenning

A integrated plant maintenance system currently running in BP installations in the UK, Canada and Belgium is to be offered for general distribution by BP subsidiary Seicon Consultancy International.

Called Teroman, the system is aimed specifically at companies involved in petroleum, chemical and pharmaceutical, mining, defence or transportation industries.

Peter Huitson, Teroman project manager, says the launch of the system is well-timed. "Much of the equipment installed in the UK is now ageing, being perhaps 10 or 15 years old, and requiring more maintenance because of this. The recession means that equipment

HUITSON... "Well-timed".

tends to be used for longer than its intended life in any case," he said.

A workforce of over 3,000 is not unusual in an oil refinery, and Teroman has been designed to co-ordinate the efforts of this force into consistent maintenance of plant which may be spread over a wide area.

"We have taken a generalised approach, to complement existing procedures," explained Huitson.

Technology exchanges to be set up by NCC

by Boris Sedacca

THE National Computing Centre is seeking to extend its areas of activity by instituting a new type of membership.

The NCC is setting up a number of groups to be known as Information Technology Circles which will allow subscribers to work together in workshops and to exchange information.

But the Centre is coming under fire for neglecting other areas, particularly its training packages which form the basis of short courses at colleges of higher education and polytechnics. Plans to resolve this problem will be released soon.

FAIRBAIRN... "Our policy to update".

Four IT Circles will be set up initially to cover office technology, communications, data processing and systems engineering, and security.

The NCC claims that subscribers to IT Circles will be able to influence the direction of its research and development programmes. It is planning to invest £750,000 in the scheme this year.

Meanwhile, plans are going ahead to update its existing training packages and to create new ones. The packages are sold to private companies for internal training programmes, as well as to education centres.

Students of the NCC systems analysis certificate at the Polytechnic of Central London, most of whom have been sent on the course by their employer, the Central Computer and Telecommunications Agency (CCTA), have criticised the course material as being outdated.

Commenting on these criticisms, David Fairbairn, director of the NCC, said: "It is our policy to update course material where changes have taken place."

The NCC says the Systems Analysts Examination Board is currently revising the syllabus for the NCC certificate.

US progress on standard for electronic mail

by Howard Karter

A DRAFT US federal information processing standard (FIPS) for electronic mail is nearing completion and will shortly be forwarded to Commerce Secretary Malcolm Baldrige.

The document details the fields an electronic mail message must contain if it is to be able to communicate with other electronic mail systems.

If the draft standard is adopted, all vendors supplying systems to the federal government would be required to comply with it.

Given the economic clout of the

federal government, such a move would be a big spur towards standardisation in the private sector as well.

According to Shirley Watkins, manager of National Bureau of Standards' computer-based office systems project in Rockville, Maryland, the document under consideration concentrates on message formats and avoids specifying internal details.

Watkins estimated that final adoption of the standard by the Commerce Department could come as soon as six months from now.

OCEANIC

TVI

AVAILABLE NOW

This can be upgraded to a 16 user 47 megabyte system with high speed interfacing between terminals (1900 characters per second) with no degradation of throughput.

It is fully supported by our engineering department and our software department throughout the U.K. Contact us now for immediate delivery or a demonstration of the many application packages available.

OCEANIC

All systems are available for either sale, rental or lease.
184 St. Albans Road West Hatfield Herts AL10 0TE
Telephone Number: Hatfield 73661
Contact: Mr. G. Pitcher
Dealer enquiries welcome.

The Televideo Systems are available for all your needs and requirements. The systems start at £2,450 for an integral 1 megabyte of dual 5 1/4" disc, 64K RAM, 280A Processor System with detachable keyboard plus function keys and a 24 x 80 12" green phosphor screen.

Leading all the way... Supplying the U.K.

Date Communications suppliers come in many shapes and sizes. The problems of choosing one who provides modems, multiplexers and networking systems can be confusing to the experienced communications manager, never mind the first time user.

At Timeplex we feel we should set out to make life easier for you and see ourselves as your data communications partner - not just a supplier.

We feel that every perfect partner should have a number of qualities. First and foremost these should include the ability to speak the same language - we know what you expect from communications systems and we really understand the protocols and languages of your computer and terminal communications.

Both sides must also have flexibility - that runs right through our approach to business - whether it be in terms of the expandability of our products or in terms of such vital things as finance with purchase, lease and rental schemes available.

Mutual trust too is vital - we have years of experience to call on plus a secure nationwide service network.

Complete and mail the coupon today to find out how Timeplex and the Nokia modem range can provide you with the Perfect Partner.

MICRO NEWS

Microprocessors are moving up market but is the software development support managing to keep pace?

Support for users is key selling point behind latest high performance chips

SUPPORT for users is the key area behind the recent spate of high performance microprocessor announcements. Development software and hardware integration aids have to be available - and be seen to be available - soon after the chips are talked about if they are to make their impact in the marketplace.

Intel, Motorola and National Semiconductor have all released details of 16/32-bit microprocessors in the past couple of months, and are all pushing development support.

Motorola, which announced extensions to its 68000 family in March, has released an update for the Exormacs development system, including a symbolic debugger and an improved macro assembler for the 68000 and 68010, and a new Pascal compiler. It gives speed increases over the previous Pascal, with a compila-

tion speed of 650 statements per minute on average compared to the old version's 250, and better code optimisation. Object code is on average 40% smaller than that produced by the previous Pascal version.

But software development tools like this are not the only treats in store. The end of this year will see a real time emulator for the 68000 running at 10MHz, which will take the form of a family interface module to the Exormacs system plus a personality module.

Intel, with its iAPX 186 and 286 additions to the 8086 family, is also getting off the mark with software development and high-level language packages. Last week it announced its first software kits for the 286 to start appearing in July.

The software development package contains tools to allow programmers to design and configure protected multitasking

systems. It includes utilities for program linkage and system building that make the memory protection features of the 286 transparent to the application programmer.

The high-level languages Intel is to offer first are PL/M, Pascal and Fortran, and the compilers will be available separately for application software development. PL/M-286 is a system implementation language that offers built-in access to the memory protection features of the 286.

With these products Intel provides the means for users to design directly with the 286 high performance microprocessor, rather than upgrading designs using the 8086 processor and development tools.

But Intel is quick to point out that the new 286 software development tools are compatible with the 8086 products already

RADA . . . In-system emulation is available with hardware launch of a microprocessor for the first time.

around. Family ties are important in the race for the high performance microprocessor market, and those already well established - as Intel and Motorola are - put great emphasis on continuity of designs. For the 186 processor Intel announced last week in the UK, the existing 8086 design tools and programming languages can be used to develop code.

But even there things are looking up, and ASM-86 and PL/M-86 will be updated in Sep-

tember to support the extra instructions the 186 has.

Both the Intel and the Motorola 16/32-bit families are rooted in products with significant histories and established development tools. National's entry into the race last week came - as it had to if the 16000 family is to make an impression on the market and gain widespread user acceptance - with a clutch of development tools to accompany the 16032 hardware.

A cross software development package, to produce 16032 code

and running at first on a VAX 11/750, consists of an assembler, linker, librarian and symbol table. A Pascal compiler will be available later in the year, as will versions running on National's own development system Super. An in-system emulator is also available for delivery in September. "This is the first time system emulation is available in the hardware launch of a microprocessor," claims National's European marketing manager for the 16000 family, Col Rad-

Cifer plans £20m turnover by 1986

INTELLIGENT terminal and desktop computer builder Cifer Systems of Wiltshire has extended its factory to increase production capacity to over 10,000 units a year.

It is the start of a planned expansion programme that will increase staff levels to 250 from the present 150, and push this year's expected £5 million turnover to £20 million over the next four years.

Marketing director Stuart Gregory puts Cifer's growth and success down to its commitment to R&D, and to its stable manufac-

turing base well away from London. He also emphasises the importance of Cifer's use of tested technology that is technically sound and cost effective.

The expansion plans for the next year include additions of new case styles for the desktop products, and the introduction of 32-bit microprocessors, megabyte memories, and a bigger range of Winchester disc drives.

British micro manufacturer Cmu is also set for continued financial growth and factory ex-

pansion. The company, which is very much based on Bristol Telecom's purchase of its Super and Multi C microcomputers, is ahead of target for a 100% growth rate in 1982, says marketing and sales director John Burrow. The company recently revealed a bill of £1 million for the month of March.

Cmu has just produced its eighth microcomputer and is soon moving to a new factory more than tripling the production capacity of its present factory in Ruislip.

LSI develops a 'task oriented' processor

CUSTOM and standard chip manufacturer LSI Computer Systems of Melville, New York, has developed a task-oriented processor for control applications. It is called the integrated controller-sequencer (ICS) and is designed for operations like logical sequencing, timing and controlling functions which require simple decision making.

The chip has been deliberately designed with these types of operation in mind, rather than computational operations, and should prove cheaper and easier to program than general-purpose microprocessors.

The ICS has a microprocessor architecture and uses industry standard memory to store external

programs of up to four Kbytes. Advantages claimed for the chip over hard wired electromechanical and semiconductor logic networks include the usual lowering of cost - in materials and labour - and increased flexibility in programming devices.

It accepts inputs from a variety of switch types, performs functions such as testing inputs, bit processing and simple arithmetic as well as logical evaluation and sequencing, outputting instructions to actuators like solenoids and valves, and to displays.

Applications seen for the chip include office equipment and time clock systems - along with automatic lawn sprinklers, car wash controls and psychedelic lights.

Cassettes for ZX81

THE range of program cassettes from Sinclair for its ZX81 microcomputer has been increased as part of a major planned expansion of the ZX81 software range. Seven games and business cassettes with program developed by software house Pelen are now available through mail order and from high street stockist W. H. Smith, who placed an initial order of 30,000.

The programs use maximum capacity of the ZX81 and its additional 16K RAM pack, says Sinclair. Two business applications are included: Vu-Calc for financial spreadsheets and projections; and Vu-File for general purpose filing.

Pertec TrakStar™ a new family of 8-Inch Winchester drives.

33, 67, and 84 Megabyte capacity for the systems of the 80's.

Superb design innovations make the Pertec TrakStar family of 8" Winchester's first class drive for business and word processing OEM's. Available now, TrakStar drives are the high performance, capacity and reliability OEM's are looking for in a compact, low-cost package.

TrakStar models offer capacities of 33, 67 and 84 megabytes so you can select the right size drive for your specific needs . . . economically without compromise.

TrakStar offers ANSI standard interfaces to provide ease of integration, using industry supported controllers. The rotary voice coil positioner, hard/soft sectoring and an 8-inch floppy form factor are part of TrakStar's unique combination of features that set it apart from the others.

Heads, disks and positioner are in the clean sealed section, with an unsurpassed 25,000 hours MTBF. The field-replaceable electronics are located outside of the sealed section, so shutdown time is virtually eliminated.

TrakStar is the proud result of Pertec Computer Corporation's commitment to perfecting technology. And it has a lot more to offer because it's backed by the industry leader in OEM customer support.

For the full story write for the new TrakStar literature to:

PERKIN-ELMER

With the Computer Weekly First Time Financing Conference a week away, some basic guidelines on going it alone

HARFORD... Cash flow presents biggest problem for new companies.

How to set up in business - and still hang on to your home

THE risks and rewards of going it alone are substantial. If all goes well, particularly in the computer industry, you can find yourself a millionaire in no time flat. If it goes wrong, you can lose the shirt off your back and the time you live in - and you can find your income for years ahead severely limited by debt repayments.

While not intending to encourage or discourage entrepreneurs, here are a few basic guidelines on making the most of success if it comes your way, and to help limit the damage if it does not.

Starting your own company: First thoughts

There are many kinds of entrepreneurs in this country. But most people set out on their own for one of three reasons:

- To exploit an opportunity;
- To achieve independence and power;

To make money.

Do not attempt to work out which one of the three you are - the majority of successful entrepreneurs are a mixture of all three.

Most successful entrepreneurs are able to conceive their objectives clearly, plan flexibly to achieve them, and are sufficiently determined to be able to overcome obstacles and failures on the way.

To put it bluntly, most of the really successful people are single-minded, unscrupulous to the front door of dishonesty and ruthless to a degree. So too, unfortunately, are many of the failures.

A final thought before plunging into the depths of how to do it, rather than the why... Have you thought about selling?

Selling is the fundamental function in any business - as opposed to money, which can be thought of as an element of the business. You cannot operate in business without

at least making your income equal your costs, and you can only do that by selling your product or service - no matter how indirectly.

So, how do you go about it?

Sole trader or limited company

These are the usual two choices offered to people starting out on their own, but there is something much more fundamental.

First of all, separate your personal assets from your business operations. There is nothing quite so painful and complicated as losing your company, your job, your home, and finally going bankrupt to boot. If you take out a loan somewhere along the road, you may have to offer your home as security - but there are ways of avoiding this and we will come to them later.

The simplest way to separate your loved ones and your home from the hazards of business is to put your home in your husband's or wife's name, or into a trust, and incorporate your operation into a limited company.

Administratively it is probably simpler to operate as a sole trader initially, but all sorts of snags arise if your business grows, and you are more vulnerable if it goes wrong. If you choose this way of doing business you should consult an accountant.

A limited company: Some basic bits

Most people do business in the form of a limited company. It is easier to trade with other companies, who may query your tax status if you are a sole trader and who will refuse to trade until they are sure they incur no liability. While the initial administration may be slightly complicated, it is easy to operate when you become

big enough to hire an administrator. Besides, The Great Intergalactic Software Corporation Ltd. is more impressive than Joe Bloggs Sole Trader - some people might even think you are some kind of fish merchant.

The easiest way to set up a limited company is to buy a ready-made. Companies providing this service advertise regularly in the Financial Times, and also charge much over £100. If you are in a hurry, you may have to settle for the name your limited company is registered with. You get a choice, but don't let it inspire ideas.

Changing the name of your company costs about £42, but you confuse customers if you do it, so you have to set up an extraordinary general meeting.

Every company has to be registered with the Registrar of Companies, and you must also register with the Inland Revenue, and if you have a bank account, you must also register with the Bank of England.

Around the time you are deciding how to legally set yourself up, you should have made an outline business plan. Here we come back to the selling bit. All the functions of business can be boiled down to three simple items as shown in Figure 1.

The marketing element can be introduced anywhere into the process, but you or your company will only make money when something is transferred to someone else for at least as much, and preferably more, than it cost to acquire or produce.

Set some objectives or goals. And don't confuse objectives with tactics.

Selling £1 million worth of Intergalactic Integrated Technology in year one is an objective. Writing an Intergalactic Integrated Technology package and finding 200 dealers to sell it are tactics (or strategy).

However, if the real objective is to make a million in profit, selling 200 Intergalactic Integrated Technology packages is a tactic with which to achieve that goal. So decide what your goals are. Once you've done that, the subsequent necessities, such as sales volume, margins, costs and so on, become easy to determine.

There should be little subsequent difficulty in determining what kind of margin can be made after costs, and how many packages have to be sold to make the magic million.

If you are selling the product yourself, you must decide who is going to manufacture the package. If the answer to that is you, then you must consider whether you really have the time to sell and still handle the acquisition phase administration.

From a simple sketch plan, your goals can be related to the resources needed to realise them. Having established the resources you need, you can then assemble them in the best tactical order to meet the marketing strategy needed to achieve the goal.

The government's place in your scheme of things.

While it is useful to recognise that the government is out to tax as highly as possible every penny of profit you make, it is also wise to recognise the "game" element in the play. Both income tax inspectors and VAT inspectors are generally helpful, especially if you go to them before allowing your problem - whether it is inefficient bookkeeping or overseas invoices - to become even a shade illegal.

Inspectors are usually wisely tolerant of the genuine mistakes of the many amateurs found among small companies.

VAT

Value Added Tax is a tax on sales turnover. If your little company issues an invoice for £100, and your total yearly turnover comes to over £17,000, you must charge 15% VAT, or £15 on that invoice. At the end of every quarter you must total up your VAT and, using a special form, pay your VAT to the Inland Revenue.

You will be back assessed if your turnover exceeds £17,000 even though you didn't expect it to, and it is illegal to start up another company half way through a period just to avoid VAT.

When you register for VAT, you will be liable for a VAT inspection, which usually takes place to your first year of trading.

Most of your suppliers will charge you VAT. When you come to total up your quarterly VAT liability, you can also add up the VAT you have been charged, and deduct it. Even if you are supplying only three small business systems a year, for say £4,945 in end-user value, you will have charged your customers VAT of £1,935, which is retained on your books.

If you register for VAT, you can deduct the VAT on your supplies, stationery, telephone bill, petrol and on any other VAT invoices you had, and you might

Starting your own firm - with the minimum of risks

From page 10

band or wife the secretary. But it may not be the wisest thing to do. Directors are restricted in what they can do, and to avoid confusion, since the secretary does the work, it may be best in the early stages to take that job yourself.

Legally you do not have to be a director to be the managing director of a company.

The minimum legal number of shareholders in a company is one, and the minimum paid up capital is £1.

It is not your accountant's job to run your business, but to ensure that your running of it is to the best possible financial advantage. Neither is it your solicitor's job to advise on business strategy or tactics. That's your job. Your solicitor simply ensures that your strategy and tactics are legal.

Your accountant should also be able to act as your auditor, which limited companies are required to have by law.

Around the time you are deciding how to legally set yourself up, you should have made an outline business plan. Here we come back to the selling bit. All the functions of business can be boiled down to three simple items as shown in Figure 1.

The marketing element can be introduced anywhere into the process, but you or your company will only make money when something is transferred to someone else for at least as much, and preferably more, than it cost to acquire or produce.

VAT

Value Added Tax is a tax on sales turnover. If your little company issues an invoice for £100, and your total yearly turnover comes to over £17,000, you must charge 15% VAT, or £15 on that invoice. At the end of every quarter you must total up your VAT and, using a special form, pay your VAT to the Inland Revenue.

You will be back assessed if your turnover exceeds £17,000 even though you didn't expect it to, and it is illegal to start up another company half way through a period just to avoid VAT.

When you register for VAT, you will be liable for a VAT inspection, which usually takes place to your first year of trading.

Most of your suppliers will charge you VAT. When you come to total up your quarterly VAT liability, you can also add up the VAT you have been charged, and deduct it. Even if you are supplying only three small business systems a year, for say £4,945 in end-user value, you will have charged your customers VAT of £1,935, which is retained on your books.

If you register for VAT, you can deduct the VAT on your supplies, stationery, telephone bill, petrol and on any other VAT invoices you had, and you might

get a result something like that in Figure 2.

You have effectively reduced your direct costs by £1,095, for the sake of some very simple administration.

Incoming VAT bills only need to be logged and filed. You also have the use of the VAT you are paid until the end of your VAT accounting period, although many people find it best to keep VAT payments in a separate deposit account.

If your customers are slow payers, you will need to keep a close watch on the build-up of VAT liabilities on invoices you have issued, but which have not been paid. You could find yourself paying out excessive amounts of cash to the Customs and Excise, which you have not received.

Tax and PAYE

You are liable, at least theoretically, for two forms of basic tax as

a small company. You are liable for corporation tax at a rate of 52% on your profits.

You are also liable to pay income tax, NIS and other payments to the Inland Revenue on any salary or payments you make to yourself or others, as directors or employees.

Once you move to PAYE and NIS payments, you are undertaking a substantial amount of periodic and annual form-filing and record keeping. To avoid the administrative burden until your company can afford to pay regular salaries, and can afford the overheads involved, the following scheme has certain advantages:

When you are drawing up your business plans, particularly your cash flow and cost estimates, you will have plugged in a sum for your own salary, or directors' fees.

You may, at the same time, have either decided to borrow money to finance the company, or to have put up the money yourself in the way of a subscription for shares.

Instead of buying shares, or putting all the money straight into the company, you should consider taking part of the loan on your own behalf, equivalent to your salary for, say, two years, then lending that sum to the company.

You then draw that money as limited loan repayments, but without either crucifying your cash flow or damaging the company's chances of success by getting working directors involved in unpaid administration.

The penalties for failing to tax through the consequences of taxation are substantial.

Person funds

From a small company point of view, there are two important points about pensions funds.

They are chargeable against tax, and certain recent pension schemes allow for reinvestment in the paying company. Using the zero administration scheme, there may be difficulties, but the zero plan is only intended as a measure to help in the first year or so.

Your accountant will advise on both pension funds and the applicability of the zero administration plan to your own situation.

There wasn't much to choose between Reading, Swindon, Bristol and Cardiff; it was the Cash Grants in Cardiff that tipped the balance.

There wasn't much to choose between Reading, Swindon, Bristol and Cardiff; it was the Cash Grants in Cardiff that tipped the balance.

needs to be said on cash flow. As Sir Timothy Harford, managing director of Singer & Friedlander pointed out at last year's conference, far more companies go to the wall because their cash dries up than go bust because of making a loss.

The First Time Financing Conference, jointly sponsored by Computer Weekly and Barclays Bank will be held at the Kensington Club Hotel, London on June 17. Details from Sir Harold of 111. Conferences on 01-641 8040, or fill in the coupon on page 10.

Starting out alone? Just started a company? Need money?

Getting the right sort of financing for your own company is crucial. Without it a computer supplier, distributor or software house could be potential world-beater but still flop. Computer Weekly and Barclays Bank have teamed up to organise a one day conference which will explain how computer industry entrepreneurs can raise money for themselves and their companies. Speakers will include senior figures from Barclays, from finance institutions and from computer companies which have already been through the experience of raising cash and succeeded. Return the coupon below to book your place and learn from them.

FIRST TIME FINANCING CONFERENCE

Kensington Close Hotel, Wrights Lane
London W8
Thursday, June 17th, 1982

jointly sponsored by

Computer Weekly

and BARCLAYS

Place complete in CAPITALS and return to:-
Sue Donnell, Room 1314, IPC Conferences Ltd, Surrey House,
Thamesway Way, Sutton, Surrey SM1 4QG. Tel 01-643 8040

Please reserve your place (s) for the First Time Financing conference to be held at the Kensington Close Hotel, Wrights Lane, London W8 on Thursday, 17th June, 1982

The fee is £6.5 plus 15% VAT (£9.75) per delegate. INVOICE WILL BE SENT. The fee includes morning coffee, lunch, afternoon tea and documentation.

Software firms learn to lure impulse buyers

AS chains of microcomputer shops mushroom in high streets, software houses are realising the importance of the packaging of their products.

The browsing shopper is unlikely to be attracted by a protective piece of cardboard wrapped around a floppy disc, shoved into a plastic bag with a flimsy list of instructions, neither will it inspire the customer to buy the real thing instead of a cheaper pirated copy of the software.

Off-the-shelf software calls for supermarket-style packaging techniques, which have already largely been adopted in the US. There is also the need to make the products appear substantial and therefore, by implication, bug-free.

"As there are more and more products available, increased product perception means that packaging must get more important for the high-volume markets," said Stuart Lang, a founder and managing director of Micro Focus.

A specialist in system software, particularly CIS Cobol, Micro Focus

is now reassessing its packaging, and looking at the possibility of introducing colour into its manuals. "We want the user to feel warm and comfortable with them," explained Lang.

One of the more recently-formed companies that has already won acclaim for the quality of its documentation and presentation is Caxton Software Publishing.

"We aim to give substance to the fact that the whole product, including the software part of it, is a quality product, and to inspire pride of ownership in the purchaser," said Bill Barrow, a director of Caxton.

He added that he feels it is important to have the disc(s), tutorial and reference manuals, and reference cards, if any, in one box, so that they can be taken away as a total pack.

Caxton allows approximately 10% of the overall selling price of a product to cover packaging and promotion, although it would be less for very inexpensive items.

Comshare is fast making a name

for its colourful packaging. The London bureau puts the packaging price at around £25 for a piece of software selling for £400, down to £5 for a £30 product. Its attitude to the subject is totally different from that of Caxton.

"I don't think micro software is a very earnest area, because the quality of the product doesn't usually live up to the image. A lot depends on the size of the company: the American end of Comshare is fairly small, so it goes for an up-market, conservative image, while we go for a bright and breezy approach. We're a bit bigger, so we can afford to let our hair down," says Nigel Pendse, financial products marketing manager.

Letting its hair down has resulted in some imaginative projects, such as the commissioning of young, unknown artists to produce designs incorporating the Comshare "bead" logo.

One experiment, red plastic briefcases to contain the Fastplan financial planning system, led to complaints from dealers that cus-

Optimiser, the first offering from Caxton Software Publishing.

"The problem is that the snappy little versions will only hold 5 1/4 inch discs, and the ones that can take an 8 inch disc are too large to fit into most people's briefcases," explained Pendse.

We're rich in the key resource for successful software development.

That's why more and more computer software development is locating in Ireland.

They're coming to the country where over 50% of the population are under twenty-five years old. These young people have grown up with an educational system specifically tailored to equip them for this technological age. Each year sees a further upsurge in the resources devoted to higher education in technical areas. Fields like engineering and computer science.

It is these young people who provide a workforce potential unequalled anywhere in Europe or the US.

But Ireland is more than a rich source of educated staff. In Ireland you will find an attractive incentive package specially designed to meet the needs of technology-orientated industries. Industries where personnel is the key factor.

Ireland offers 100% training grants to new service industries and generous employment grants. And these are just two of the cash grant programmes available. In addition, you'll find that Ireland has the lowest corporate tax structure in Europe.

You will also find a working environment that is second to none in an age where employees rightly expect their job to permit an attractive lifestyle as well as simply a good salary. Because, in Ireland, while keeping pace with the changes dictated by this technological age, we've managed to retain all that is good in our environment and way of life.

Find out more about locating in Ireland. Contact the nearest office of the IDA Ireland for further details. We'll be glad to help.

REPUBLIC OF IRELAND
The intelligent location
in Europe for international services

IDA Ireland

INDUSTRIAL DEVELOPMENT AUTHORITY
The Irish government's industrial development agency has offices in London at 68 Davies St., London W1V 4LS. Telephone: David O'Donnovan 01-629 5941. Offices also in Dublin, Amsterdam, Paris, Cologne, Houston, Cleveland, San Francisco, Boston, Fort Lauderdale, Sydney and Tokyo.

SOFTWARE BRIEF

Schools' 'write your own' contest

A SCHOOL software competition has been launched by Pricer Programs, jointly sponsored by Hutchinson Education and Transam Computers. Open to primary and secondary school teachers, the competition is for the best educational program for use in any subject up to A-level. Programs for most machines are acceptable, and cash prizes ranging from £500 (first) down to £100 will be offered. Closing date is 1 July, and entry forms are obtainable from Bob Osborne, Pricer Programs, 17 Conway Street, London W1P 6JD.

Osborne commends

RESPONDING to the plea for more software for the Osborne portable microcomputer, Lisa Micro Computers has announced a communications package to allow the machine to be used as an intelligent terminal to a remote mainframe or any other mini. Priced at £100, Comm Link includes built-in editor and automatic error detection with manual retry.

Total retrieval

MINICOMPUTER system manufacturer Gould SEL, a subsidiary of Gould Inc in Chicago, has introduced an English language query facility to work in conjunction with the Total database manager. Called T-Ask, it is a procedural information retrieval language which allows online interactive interrogation of the database for ad hoc enquiries.

Debt accounting

SPECIALIST in legal and medical software Automatic Information Management (AIM) has added a debt accounting package, Debtcharter, to its Charter range of legal systems. Currently available on ICL System 10, and shortly on Digico equipment, Debtcharter keeps track of the solicitor's charges, money owed to the client by debtors, and disbursements on his behalf.

Range for R-range

A COMPREHENSIVE range of software packages for Rediffusion R800 and R1800 series minicomputers has been released by John Lane Systems of Petersfield, Hampshire, part of the John Lane Group. Costing between £1,500 and £3,500, products available include financial ledgers, time recording, word and text processing, mailing, and a report generator which JLS believes to be unique to the Rediffusion R-range of equipment.

Fixed assets

TWO leading photographic companies, Agfa Gevaert and Durr, have bought the IBM System 36 version of the Sapphire fixed assets package developed by Pentagram Software Products of Amesbury.

For car dealers

A MINICOMPUTER system for motor dealers is now available from MAI, for running on its full range of machines. Offering full word processing facilities, Deal handles new and used vehicle sales, workshop, spare parts and accounting.

Brokers' system

A REAL time commodity and foreign exchange system has been announced by Peter Leach, a specialist consultant, for running on Datapoint minicomputers. Shortly to be installed at commodity brokers Rudolf, Wolf & Co, Adaptable Currency Commodity Real-Time Datapoint (ACCORD) covers world markets for up to 10 commodities using the same market and client base simultaneously.

OP SPOT

Instead of a bureau, why not hire an outside firm to run the whole installation?

IN a time of recession, one of the areas that companies subject to close scrutiny is data processing. The DP budget is a major item on the corporate balance sheet, and many firms are seriously looking for an alternative to an in-house installation.

An obvious if extreme step to take is a complete shutdown of the computer department and the transfer of the workload to a bureau. But apart from the large number of redundancies caused by such a move, there is also an effective loss of control.

It is extremely unlikely that there will be a bureau located just down the road, and deliveries of output from batch systems will always be that much slower than was the case with an in-house machine. Debatching, decoupling and delivery of output has always accounted for the largest proportion of time in the cycle of a batch system. Time on the machine typically takes less than five per cent of the turnaround time.

Another alternative becoming popular, particularly with small companies, is a shared data centre, which serves several companies' needs. With costs divided between them, the operational costs are greatly reduced, yet the members of the co-operative still maintain the personal contact with the operations and systems staff which is often lost when moving to a bureau environment.

But there is a third option for the company looking to reduce its overheads, which falls somewhere between these two extremes. When it is decided that an in-house computer has become an expensive luxury, firms can hand

over their entire DP department — hardware, operators and systems staff — to an outside company which will then run outside the installation.

The traumatic handover of work from an in-house machine to either a shared installation of a bureau is avoided. The workload continues to run on the same machine with the same staff.

Handing over computers to be managed by another company first became an option in the late 1960s, when the Hoskyns group started its facilities management service. Since then, over 60 firms have had their computers taken over by Hoskyns, ranging from banking and local government to manufacturing and stockbroking.

Obviously, running 60 machines is impractical owing to the large amount of spare capacity spread across them. What Hoskyns has done is to set up a central core of three major data centres, with the facilities management sites linked to them.

Hoskyns currently has nine satellite data centres linked to the main three at Trafford Park in Manchester, Gravelly Park in Birmingham, and Regent's Park in London. The total workload is constantly assessed, and there are often surplus machines of one particular architecture.

When this happens, the workload of one or more of the satellite centres is transferred to a central installation, the hardware and staff being redeployed elsewhere in the Hoskyns network. Not only are jobs made more secure when a facilities management deal is signed, but the prospects for working on different manufac-

turers' kit and travelling to different installations are enhanced.

A further benefit to the user who decides on facilities management is that of resilience in the face of disaster. With the spread of hardware around the UK, Hoskyns can quickly move critical work between data centres, assuring the client of virtually uninterrupted service.

Alex Lander, the man responsible for the running of Hoskyns' facilities management deals, says that he has resisted the temptation to go over entirely to one manufacturer's hardware. The company's facilities are split roughly 50/50 between ICL and IBM.

"We don't want all our eggs in one manufacturer's basket," he says.

The Regent's Park centre, converted from a warehouse last year at a cost of £300,000, currently houses a 4341 and a 3701/48 from IBM, and a 1903T and a 2904 from ICL. Another 3T is currently in use at the Smith's Industries site in Cricklewood — a recent deal — along with a 1904S.

Dave Waroe, manager of the Regent's Park centre says that the 4S is likely to be moving in to the control site soon, enabling one or more of the smaller machines to be disposed of. Two separate shift systems are in operation at Regent's Park — three shifts with four shift leaders for the IBM machines (one shift leader is responsible for training), plus 17 ops, and a two-shift system for the ICL machines, each with two and a half operators.

Cricklewood currently has five on a shift, but numbers will swell when the ex-Smith's machine is moved in. In accordance with modern trends, no shift allowance is paid. There are 19 users of the IBM machines, and nine of the centrally-located ICLs. A further dozen ICL customers are served from the Cricklewood centre.

Maintenance is handled by the manufacturer's own engineers. Both Waroe and Lander expressed the view that this is still preferable to the use of third party contractors. Waroe also pointed out the difference between ICL and IBM engineers:

"IBM engineers tend to be bright young things, while ICL seems to use mostly older, jovial types." I will not comment.

Waroe favours IBM hardware,

Dave Waroe watches his favourite hardware being operated by Phil McGoldrick.

citing the number of goodies available, such as colour consoles and terminals, but says that ICL's operating systems leave IBM's standing.

A development of facilities management, aimed at firms contemplating a move to new hardware, covers either the move from one generation of machine to another, or a different manufacturer.

When taking into consideration the average time which elapses between major hardware upgrades (around the five-year mark), and the usual length of stay in one company of ops and programmers (three years), it can be seen that any expertise gained in an upgrade done in 1980 will probably have

left the company before the next one is due.

Thus most firms are singularly unprepared for a painless transition to new hardware. Companies such as Hoskyns, on the other hand, are frequently transferring workloads and moving machines from one location to another as they take on more facilities management deals and rationalise their computer resources.

The Hoskyns service, known as Crossroads, differs from normal facilities management in that the complete takeover of the client's computer department only lasts for the duration of the problem period between the rundown of the old service and the stabilisation of its successor.

If it shocks you, it'll horrify your hardware

ANYONE who has worked with computers for any length of time, or any electronic device for that matter, will have experienced many static shocks from the hardware. To be more exact, it is the hardware which receives the shock from the humans, their personal static charge being earthed through the equipment.

Walking on nylon carpets and wearing non-conductive shoes both contribute to static build-up, but the discharge rarely causes operators much concern beyond the initial discomfort and the risk of which explosive to use.

Computers, however, tend to be much more afraid of static electricity, and with good reason. The sudden appearance of several kilovolts at one side of an integrated circuit usually results in deep-fried chips.

At one site where I worked, the paper tape reader (yes, this was some time ago) tended to charge up the paper tape as it went through the read station at great speed.

The charge would then build up in the metal bin designed to catch

the tape, and when sufficient voltage had accumulated, it would discharge back through the reader. Although the reader itself was earthed, the static would follow the earthing system to the drum used to store the operating system.

The shock of this event proved too much for the system to bear, and there were many extra teabreaks while the system was being reloaded.

The simple expedient of earthing the tape reader's bin cured the problem and brought the unscheduled interruptions to an end.

The other static-related problem I have encountered has been the "sitting down at a VDU... OUCH!... oh rats, the thing's gone into send" situation. This usually only causes an annoying delay after logging in as the terminal moves its cursor across the entire screen in a vain attempt to find the commands that you haven't had a chance to type in yet, although vida have been known to be lost to the system as a result.

Think yourselves lucky that volatile and flammable liquids are not often met in computer rooms.

Vida have been known to be lost to the system.

A report from the health and Safety Executive* on the hazards of static build-up cites the following example:

"In a typical incident an operator was in the process of loading an earthed 900-litre mixing vessel. After he had added 175 Kg of toluene, he started to add epoxy resin in 25-Kg lots from paper sacks. He had emptied three sacks into the aperture in the top of the vessel, and as he looked inside it, there was a discharge from him which ignited the vapour in the vessel."

The subsequent investigation showed that he was wearing insulating rubber-soled shoes and that the floor was covered with a thick

layer of insulating resin deposits." The report does not actually say that all that was found of the operator was his shoes, but I'd be careful with the isopropyl alcohol in future if I were you.

* Electrostatic Ignition Hazards of Insulating Materials. HMSO, 49 High Holborn, London, London WC1V 6HB. £1.50.

— a robust, low cost tool —
— a perfect termination when used with COAXIAL TOOL KITS AVAILABLE

MIDLECTRON
have it *paper* Taped!

Midlectron has an exemplary record in Paper Tape Products, with over 3000 units installed in various forms, coupled with in-depth engineering expertise and manufacturing facility to tailor any equipment to suit precise needs.

M42 — General Purpose Paper Tape Reader/Punch.
Designed for the computer market, switch selectable to operate at 8 or 16 level — a cost-effective computer tool.

M43 — Paper Tape Reader/Punch with local Edit facilities.
All the features of the M42, but including local edit facilities — ideal for users who require the ability to read a character, word or line and edit as necessary.

M39 — Portable Paper Tape Reader.
Ideal for use by engineers in the field, will read at 160 cps, incorporates touch sensitive controls, low noise level and is a low cost, functional unit.

M82 — Numerical Control Program Tape Preparation Unit.
Intelligent paper tape reader/punch, converts between ASCII and EIA244 codes. Plugged and reliable, at home in hostile environments but is both attractive and quiet in operation.

TELEX-MATE — Off line Telex Tape Preparation Unit.
Can be used in conjunction with special terminals, typewriters, computers and Word Processors for easy preparation of Telex messages.

Contact: Janal Bell, Eric Pugh or Steve Hewitt
— they have a solution taped!

Body language of the interview room

WHEN it comes to looking at existing information systems prior to designing a new one, the systems analyst has many fact-finding techniques available. One of the most popular and frequently used is the interview.

It does offer a fast method of getting answers to particular questions, as well as being the only way to determine some information.

Professional analysts carefully arrange their interviews, making sure that the interviewee is correctly approached and that appointed times are adhered to. The analyst will prepare a list of the information required from the interview; however, a very important part of the interviewer's job, in this context as in any other, is to listen to what the person being interviewed has to say about the topics under discussion and their environment.

The main purpose of the interview may be to obtain specific information, but another equally important objective is to establish a good relationship with the people being interviewed. This is vital to the successful design of the new system and especially to its implementation.

So, an interview should lead to the analyst receiving some specific information and, in addition, some information about the interviewee. The specific information can sometimes be verified by observation or by consulting records or other methods.

Here we observe an illustration of systems theory: the prepared topics of the analyst can be viewed

as input to the interview, the information obtained, both direct and indirect, can be viewed as the systems output, the processing can be seen as the interaction between the two people in the interview, with each monitoring the other's perception of the information transfer to check that correct understanding has been reached.

Later verification of any quantities is a form of error control. The physical environment and the organisational context of the interview can be recorded and inspected.

In an interview the attitude of both parties can have an enormous effect on the information transmitted

Closer examination of the processing shows us that there is more than one form of information transfer between the two people. There is the verbal information and, with it, a whole host of messages often referred to as "body language".

It is a well known fact that, in an interview, the attitude of both parties can have an enormous effect on the information transmitted. A large aggressive person interviewing a shy junior may get very different information than if the interview had been conducted by a smaller, very friendly person.

Anne Leeming lectures at the Centre for Business Systems Analysis at City University. She is also a consultant on microcomputer systems.

A quick look at TV interviews will supply plenty of other examples.

The analyst does not yet have any formal techniques for recording such body language. It can introduce bias into the information transferred. An experienced analyst will recognise the bias when it occurs and consider it when interpreting the results of the interview. But the full extent of the effect of bias on the interview is not known with any sort of accuracy so it is difficult to know how much allowance to make.

We have quite a problem here; it is possible or desirable for an analyst to so control or tailor his interviewing techniques that his attitudes will have no effect on the interviewee? Alternatively, is it possible to develop some method of recording "body language" so that all the information being transmitted in an interview can be assessed and evaluated? A middle way might be to train interviewers to at least recognise such problems.

After all we can't all be like Sir Robin!

Anne Leeming

Filing your papers can be a bind

THE youngsters at school find a need to organise their papers in what they call a file. The word has a more precious meaning in computing and so the utilitarian term ring binder comes to be used in later life. And it's not just the term, but the binders themselves, that grow as row on row come to accommodate the manuals intended to contain the answers to every sickness that ever invaded a system.

The distribution of manuals in ring binders brings its own disease. The rings on binders have been through the post never seem to close properly again. As the pages are turned the leaves come off the rings and half the value of using binders is lost.

It's no good attaching your infatuation to the Post Office. Their system is for bulk handling over distances and they have always made it clear that packages should be properly packed.

What can be done? It's not sufficient to rely on a padded bag. The padding will absorb shocks when the bag is handled, but not weight if your binder is at the bottom of the pile. A rigid container is called for that will enable the ring binder to travel in its own little protected environment. If a heavy weight of paper is already on the rings then the pages should be retained to avoid deceleration forces deflecting the rings after a short flight through space in the sorting process.

An alternative strategy is to use a heavier quality mechanism in the binder. A light and consequently cheaper mechanism may be quite adequate on the shelf and for reference but heavier quality mechanisms are available. The binder

Cliff Dilloway is an independent consultant specialising in accounting software, taxation and payroll.

manufacturers usually buy in the mechanisms and make up to order, so if transit is among your requirements then so should be a stronger mechanism.

In the same vein a mechanism with a wider base should be able to stand the shocks of transit, but again they cost more. Without much evidence to back it up, the rectangular style of ring is believed to be stronger than others. Certainly this style of ring will more readily accept masking tape over the joint to permit the two halves of the ring to share the shocks of the journey.

One form of protection that I can recall seeing but have not been able to track down commercially is a purpose-made polystyrene former. Fitting inside the binder and over the rings the former holds everything tightly in place and absorbs the load and shocks.

Those who need to distribute their manuals by mail should see the advantages of binders reaching their customers in a usable condition and a simple solution to that problem is what is needed.

Cliff Dilloway

Candidates for job burn-out

WHILE the DP team have their collective heads down producing user friendly systems, their jobs could be growing unfriendly. A US report suggests that burn-out symptoms are frequently being identified among DP people, the only known remedies being rest, relaxation, and change of job.

The epidemic is not necessarily limited to DP personnel, on the UK. High on the job burn-out casualty list could be Mike Kenneth Baker and his IT awareness team, the director of NCC, David Fairbairn, through his attempts to organise and regulate software product schemes, the BCS leader in condemning the government privacy proposals, the ICL management in trying to keep pace with their energetic base, and the IBM Personal Computer salesman trying to keep pace with demand.

It is possible that the authoring have already made some contingency plans for the burn-out of man. An IT exhibition at the London Science Museum has opened. Alongside the British Leyland computing systems featured, some prime examples of burn-out DP managers could be displayed.

Certainly there should be a lack of supporting equipment shown. According to a useful publication from the PCML Group, current printer ranges can operate at speeds approaching 20,000 lps — a speed which should guarantee rapid machine and paper burn-out, if not burn-up.

The company also tackles the problems of tape streamers and systems. With transfer rates exceeding 90 Kbytes/sec, the tape would not only be in overdrive, streaming mode, but showing signs of scumming, and easily qualify for a place on the IT DP burn-out stand.

The burn-out symptoms are periodically various and insidious but most involve a loss of energy and working enthusiasm. With reports that over 50% of the US data centre workforce are already afflicted by the complaint, it can only be a matter of time before the pestilence spreads across to UK installations, with the probable exception of Stato and banking DP centres where stress and strain attitudes are seldom present.

Many industry observers would already claim that job burn-out is hardly likely to affect most large DP personnel, who in the main suffer from job boredom, job frustration and general job dissatisfaction. Job stress, however, does not seem to be a listed factor for those involved in changing jobs.

A review undertaken by the Californian State Polytechnic found that DP personnel moved jobs because of existing limited opportunities, obsolescent procedures and facilities, non-existent career and promotion paths, and general frustration in getting over-ambitious projects off the ground.

Closer to home, reasons for leaving tend to be rather more practical. Quoting for more, probably leads the field, closely followed by job extension — the task rather than the individual. Plus a strong suspicion that job hunters stand a better chance of their track record revealing that they have moved around the industry regularly.

In fact job hunting could be a "contributory" cause of job burn-out. Having to fill in unco-ordinated and unstructured job applications, each requiring different facts and figures, could turn the hunt into head-banging procedures.

Technology for a civilised society

THE Pope has come and gone, the war in the Falklands lingers on. Information Technology Year has reached its halfway stage. At Versailles the Western world leaders met and President Mitterrand made a call for the industrialised nations to ensure that new technology is used to create, rather than destroy jobs.

We in the computer industry might be excused if we are confused about what is and is not important within the bounds of our once cloistered world. The fact that the bounds have dramatically widened over the past decade, largely as a result of the "microchip revolution", is probably the cause of much of the confusion. Computer Weekly has always identified itself with the mainstream of the computer industry, and will continue to do so. But the hyperbole which is attached to the grander world of "information technology" threatens to blur the issues which are of most importance to us.

Not quite lost in the hoop-la which attends any summit of the "free world" leaders was the report by Mitterrand which considered the effects of new technology on employment and the general well-being of the world. Among other things he called for an immense training effort, and a more "civilised" use of technology. Clearly in Mitterrand's mind was the danger of an elite sector of society having a corner on the knowledge of how to make technology work for us.

There have been moves in this country to tackle the problem of training in what Mitterrand and others have called the "third industrial revolution". But while the Thatcher government has made much ado about its £1 billion New Training Initiative, the sad fact is that the same government is overseeing an extraordinary ravaging of the educational system. The cuts in education budgets and with it the denial of university places to qualified school-leavers, will in another ten years' time rank as one of the most short-sighted decisions of this government.

The government must be made to understand that a nation which hopes to be at the forefront of new technology needs a highly educated workforce. The guns or butter argument needs to be expanded into education.

Good relations

IT is all too easy for young high technology companies which are experiencing growth pains to overlook the importance of good industrial relations practice. The computer industry, still largely unregulated and not heavily unionised, has used its ability to move quickly in the marketplace to survive and grow. That has sometimes left good labour relations in the wake.

A dispute between Electronic Data Processing and its newly unionised staff points to the difficulties that can arise when companies do not clearly impress on their workforce that they, as well as the company, will benefit from rapid adaptation to change. Companies which ignore labour relations provide rich territory for union recruitment activities.

Trade unions came into existence to counter-balance the power of large companies — companies which typically dominate stable markets, and can afford to be slower afoot in reacting to change. The trade unions' role in dealing with young, high growth companies needs to be carefully thought out.

It is all very well for the Association of Scientific, Technical and Managerial Staffs, which is representing the EDP staff in the dispute, to seek to "educate" the company in good industrial relations practice. But in the same breath that ASTMS national officer says that he only wants to make EDP understand the law as it applies to labour relations, he adds that he regards recourse to the law as a "fallible back-up" to industrial action.

ASTMS regards the EDP case as a "significant dispute", and it clearly intends to turn its guns on smaller companies. One must question the rationale of using a canon to shoot a fly. EDP must look closely at its labour policies; but ASTMS must look at its own negotiating and disputes procedures to ensure that it has a balanced and effective method of dealing with small and nimble high technology companies.

1984 and all that . . .

THIS week's example of the strange things people say about computers was sent in by R. Cooper, of Aldershot, Hants, who writes:

"...but screws may well soon be a thing of the past as micro chips take over much of the dirty work."

LETTERS

Talk to councils in search for a site

AS a councillor in local government, your editorial (CW, May 20) struck home to me. I can appreciate your concern regarding planning authorities, but the fault does not rest entirely with us.

I, too, am concerned at the frustration that is being experienced by the computer industry, and offer the suggestion that firms talk to their local council about their problems; the officers are professionals and give willing advice when jobs and rateable value are at stake.

My own Council of Rochester-Upon-Medway City is desperate to

attract industry into the area. I am sure that they would listen to any request for sites or land.

The Medway area stretches down the A2, straddling the River Medway: it is a port, has a small airport, is bounded by the M2 motorway, has good communication with Gatwick airport, and fast electric trains run to London and the South Coast.

Thorn, Marconi-Elliott, CAV-Lucas, Facit, and other science-based firms are there. HM Dockyard is scheduled to close, throwing up an abundance of skilled labour, including electronic

and computer personnel, who I am sure would rather stay in the area if there was work available.

Readers of Computer Weekly who are looking for an understanding council with sites or land available, please write to me and I will personally present your case to my council.

C. W. HAZELL

'Sponsor teacher re-training' appeal

PHILIP HUNTER's article (Programmers Page, CW, May 13) on the CMG report and John Barnes' (SPL) reaction, seemed to reflect a number of half-truths. It seems clear that CMG has not clearly foreseen the effect of the new generation. This will depend on an open-minded creative approach which will not be a result of "set theory" or Basic. Both of these

tend to stultify the children and dim their wits if stressed, as they often are, as ends in themselves.

Teachers today have a great responsibility because it is easy to see the enthusiasm of young people when computers are studied.

One major problem is evident: few teachers have any training in computing. The Computer Education Group has urged institutions to put on such courses and published appropriate guidelines. Several courses now exist. There is one in London at South Bank Polytechnic, one in Scotland at Paisley College of Technology, one

in Northern Ireland at Ulster Polytechnic, and at my own institution in Leicester.

This is a small but welcome start. I would like to invite major computer firms to sponsor teachers on such one-year in-service re-training courses.

Anyone wishing to sponsor a school-teacher fellowship at Leicester Polytechnic, should contact me and I will discuss all the details with the relevant staff. Professor D. E. CONWAY

Computing and Statistics
Leicester Polytechnic

Commodore tests severe

GUY KEWNEY in his letter (CW, May 13) implied that Commodore approved the CP/M as a way of adding CP/M to a Pet because it receives a royalty from us or our UK distributor, Tamsys.

It is indeed true that Commodore will receive a certain royalty in exchange for printing details of our product in its "approved" catalogue, for carrying out extensive approval procedures, for assisting us in many ways: technically, promotionally and by lending us equipment from time to time.

This is normal practice. It should be noted, however, that before agreeing to put any product in the catalogue, it subjects it to rigorous testing of a critical kind. One of our cards was with Commodore for several weeks and it tested both the hardware and the software.

Rather than criticism, Commodore deserves congratulations for providing a valuable service.

Rapid climb

AN article (CW, May 6) entitled Systems Builder Climbs from Nought to £1m in Two Years was inaccurate in one major respect. Darkcrest does not have — and never has had — an OEM agreement with Digital Equipment and the company is not a Digital Equipment OEM.

MARCUS PALLISER
Public Relations Manager
Digital Equipment,
Reading, Berks.

Relevant advertising?

I SHOULD like to comment (in fact complain) about the style of advertising in Computer Weekly (May 27).

Why does Computer Search feel it necessary to announce the vacancies of network team leader and coordinator beside a pair of female legs in suspender and fishnet stockings? Does Computer Weekly really think this is a valid style of advertising?

Since shapely legs and stiletto heels seemed to be absent from the job description/requirements, I can only assume that such an illustration was there for the (sexist) purpose of titillation.

Advertisements like this not only insult many of their readers, but work to reinforce the attitudes of patriarchy; and that we are certainly better off without.

MUFFY THOMAS (Ms)

DOWNTIME

Behind closed doors

ENGLISH seaside resorts have never been noted for air temperature much above 50 degrees Fahrenheit, a surfeit of sunshine, or providing a ready market for solar heating salesmen.

Eastbourne in May is no exception, and delegates at the ICL Computer Users' Association were therefore excused the painful decision whether to attend the presentation in the Victorian splendour of the Grand Hotel, or to place knotted conference programmes on their heads and relax on the beach.

Thus ICL supremo Robb Wilnot was assured of a full house for his state-of-the-company address. The house would have been even more full had not Europe's leading computer company decreed that Chad was persona non grata at

Robb's presentation.

So, while the assembled multitudes gaped in awe as Wimbledon's favourite son whipped through 61 overhead projector slides in 55 minutes, your humble reporter was forced to remain unwatched in the conference organiser's free bar.

The time was not wasted. Chad made two new friends — an ICL personal computer, and a bottle of White Horse whisky.

As if by magic, at the very moment when Wilnot finished his dissertation, the rain stopped, the grey clouds parted, and the sun streamed through the Grand's elegant windows.

If the man can make the sun shine in Eastbourne, ICL should have no trouble in unting IBM from the World No 1 slot.

Cycling into the beyond

USERS of Starlink, the computer network for astronomers, can claim expenses under certain conditions for travel to their nearest site. One of these conditions seems rather strange — the nearest site has to be outside cycling distance.

Since the rule does not make

clear how far cycling distance is, I had better give you my guideline, based on the observation that practising Roman Catholics used to be excused having to attend Sunday Mass if their nearest church was beyond walking distance.

Holy Mother Church, however, went further than Starlink and decreed what walking distance is — a blistering three miles.

Now a comfortable cycling speed, assuming a mean gradient up or down of one in 50, an average three-speed touring bike, and a clean bill of health, is 14 miles an hour.

A comfortable walking pace is 3½ miles an hour.

On this basis I issue Chad's decree: Starlink users may claim travelling expenses when their nearest site is more than 12 miles distant.

Pope in action during the Pope's visit.

Holy wars erupt

A PORTNIGHT ago I told of Priestel, the videodata service set up to warn the Pope that glancing at him from the side aisles of his public meetings would be the Reverend Ian Paisley.

I am glad to report that His Holiness bearded the warning. At an open air mass during his visit, the Pope was plagued by Paisley and his adherents howling "No Popery here!" and other blasphemies.

The Pope caught Paisley's eye, smiled and promptly blessed him with the sign of the Cross.

It is said that Paisley needed a bath in carbolic acid after that to exorcise the papal stink.

Whale of an image

I KNOW we live in an age of lookalikes, but I was unaware that it had spread to the type of print used for company logos. Until yesterday that is, when I noticed the acronym BLEN adopted by Electronic Services of Henley.

The odd thing about it is that the letters are printed with the same blue lines as IBM uses.

A careless glance at BLEN's publicity material, and you think you are reading literature from GBW (the Great Blue Whale).

GBW's swim in the ocean of information technology is clearly aided by guidance from pilot fish like BLEN.

What an exhibition!

TEN score of men and women exposed their bodies in the centre of Hanover in a display of unparalleled naked aggression against an exhibition of electronic weapons. I for one was shocked that a display of inert gadgets could elicit such emotion.

But an often with protests, the exhibition was only a catalyst. The aim was to secure the release of four protesters arrested at a previous demonstration.

Or perhaps the Germans were merely fulfilling the old Byzantine proverb: The fanatic redoubles his effort on forgetting the aim.

PLESSEY
PERIPHERAL SYSTEMS

When you've spent years developing mini-computer operating systems for the competition, know their hardware inside out, completely understand their limitations and finer points, then you can make a more efficient and less expensive minicomputer.

POINT 4
DATA CORPORATION

We've made it.

At POINT 4, we probably understand the mini-computer market better than most. Developing software for our competitors gave us an invaluable insight into the way throughput could be improved, memory and communication could be extended and operation and maintenance simplified.

In addition, we looked for a reduction in the number of components and sub-assemblies and consequently, a major reduction in price.

At an entry point of around £12,000 and up to double the speed of comparable minicomputers, the remarkable POINT 4, with its Programmable

- ☐ Flexible configuration — more than 100 possible disc drive/controller combinations
- ☐ Instruction execution, including access, in 0.4 microseconds
- ☐ Up to 32 Mb of accessible memory
- ☐ Up to 1200 Mb of disc storage
- ☐ Up to 128 I/O ports
- ☐ Up to 32 interactive terminals
- ☐ CPU and RAM on one board
- ☐ DMA Multiplexer
- ☐ Compatible with Data General Corp. Instruction Set
- ☐ Extended Instruction Set via Programmable Control Store
- ☐ Built-in CPU/Memory diagnostics
- ☐ Memory parity error detection
- ☐ Battery back-up
- ☐ "Jumper Saver" logic
- ☐ Front loading chassis. No slides required
- ☐ Separate power supply chassis
- ☐ Cache Memory
- ☐ Remote or attached operator control unit (optional).

Sequential Control Logic, represents standards of efficiency and value for money we believe you'll find extremely hard to beat.

Microprogramming techniques and a programmable control store permits the emulation of various instruction sets, and a high speed inter-bus operates at 4 megabytes per second. Flexibility of configuration allows a wide range of peripheral devices not limited to a single range. A virtual control panel and built-in diagnostics makes the POINT 4 probably the easiest computer on the market to operate and maintain. Yet, the computer, memory and all options are implemented on a single printed circuit board.

The POINT 4 is also available with a wide range of software products. The multi-tasking, time sharing systems, IRIS and BLIS, support simultaneous system use for data entry and retrieval, as well as programme-preparation debugging and execution. The system is designed for maximum flexibility in configuring system peripherals and supports ASSEMBLER, COBOL and BASIC Languages, a variety of utilities and an automatic programming system.

Ultimately, the POINT 4 is a minicomputer of consequence no buyer can afford to overlook.

PROGRAMMERS PAGE

John Gurd of Manchester University helped develop a Fifth Generation computer using the dataflow technique

New techniques mean new thinking for programmers

THE race is hotting up to provide the hardware and programming languages for the fifth generation of computers.

It looks likely that fifth generation machines will embrace some sort of parallel hardware architecture such as we already see implemented in crude form in large mainframes like the IBM 370, and supercomputers like the Cray 1, and the Control Data Cyber 205.

Parallel hardware will only work at optimum efficiency if it is programmed in languages designed to exploit it, rather than in present-day sequential ones. The implication is obvious: programmers will eventually have to pull up their roots and sow new seeds.

Parallel hardware aims to speed up the execution of individual programs by processing simultaneously those parts that do not depend on each other for an intermediate result.

One approach to parallelism is the dataflow technique being developed by the team at Manchester University led by John Gurd and Ian Watsoo, and funded by SERC, the Science and Engineering Research Council.

A dataflow machine is driven by the data, rather than by sequential instructions which fetch and dispatch data items from core and reassign locations within core. Data flows through the machine, moving at once to the location at which the next operation is to be performed.

Dataflow machines need new data-driven languages which express relationships between variables, and which reject the traditional von Neumann approach of executing instructions one at a time through sequential memory access operations under the control of a program counter.

The Manchester team is building a dataflow machine to test data-driven programming languages and operating systems designed for the new hardware. A prototype of this machine will be discussed briefly at the fifth generation conference to be held at the Royal Garden Hotel in London early next month.

Gurd and his colleagues have been promoting dataflow for large technical applications such as weather forecasting, but the Japanese, who conceived the idea, have identified it for a mass market.

According to Gurd, current attempts to exploit parallel hardware, as in the Cray 1 supercomputer, suffer from the fundamental weakness that they are based on traditional programming, which in turn is based on the idea of executing instructions one by one.

Because the program itself tells the computer when to hire and fire data from peripheral input devices, there is at once the problem for the programmer of organising his data accesses efficiently.

A simple way of making parallel hardware is to link processors together. Such an expedient, seen in the ICL DAP, is cheap, and can achieve impressive results. But programs have to be painstakingly partitioned manually.

Multiprocessors operate sequentially under a program counter. But there are often many program counters picking their way through subprograms simultaneously, posing nightmare communications problems.

Apart from this somewhat in-

formal link of processors, there are two parallel hardware structures in current use: the pipeline and the parallel array.

The pipeline gives speed through overlapping — many different things are going on at once. It consists of a series of stages, each dedicated to a given task. In theory, a pipeline will at any instant have as many jobs running through it as there are stages.

In a parallel array, many identical or similar actions are going on at the same time. These are ideal for performing operations on vectors of elements when the job can be split into many equal identical parts.

The parallel array is slow, but delivers whole batches of results at once. The pipeline is fast, but delivers results only one at a time in machine gun-like succession.

The two processes work well in harness therefore, and this is seen in most present attempts to offer parallel hardware. The Control Data 6600, for example, uses a pipeline to fetch and decode tasks, followed by a parallel array of two adders, two multipliers, a shifter, and a divider.

The trouble with both pipelines and parallel arrays is that they rarely achieve their full speed. The irregular nature of most programs means that pipelines usually have empty stages, and parallel arrays are effective only with similar operation.

Dataflow is an attempt to exploit fully the capacity of the central processor by filling it with data at various stages of execution. It sprang from the realisation that hardware and software would have to develop together, rather than each going its own way based on sometimes conflicting concepts.

Dataflow machines such as the prototype now working at Manchester consist of networks of nodes, each of which performs a certain operation. Data circulates in packets of information which consist of a value, and a token to indicate the node which contains the instruction for executing the value.

The prototype has just one ring made up of five processors in series. Gurd points out that in two years' time the SERC machine will possess four complete dataflow rings operating in parallel.

The five processors of the ring are the switching unit, a token queue, the matching unit, node store and processing unit.

The switching unit controls the flow of data packets from the input/output unit, and the circulating dataflow system. In the case of the Manchester prototype, the input/output unit is a conventional computer, a Digital Equipment LSI-11, which has all the standard peripherals including a telephone link to external mainframes.

The token queue is a first in, first out buffer for the data packets with their tokens. It accepts the packets from the switch and feeds them on to the matching unit.

The matching store is the most critical part of the system. It marshals data packets with the same tokens, and sends them to the same node.

When all the data packets destined for a particular node have arrived, they may have an arithmetic operation performed on them, such as addition. Or the node may order one of two actions according to the value of just one.

data packet — in other words the equivalent of a simple IF type statement in a high-level language.

The node store accepts the clusters of data packets ordered according to their destination node from the matching unit, and constructs an executable program for the processing unit.

In the prototype, the processing unit is built for maximum flexibility, and consists of a pipeline and a parallel array of processing elements. The pipeline performs fast operations such as a collection of performance statistics, a vital part of any hardware prototype. The processing elements perform the hard number crunching.

Gurd demonstrated the prototype to me on a program to calculate the factorial of the first 700 numbers — that is, all the first 700 numbers multiplied together. The execution time fell in proportion as additional processing units were linked in, so providing a perfect

example of the benefit of parallelism.

The algorithm used demonstrates the kind of thinking programmers will need to use to exploit parallel hardware. Here it is in pseudo-code:

```
1 FACN = FAC(1, n) WHERE
2 FAC(X, Y) = Y IF X = Y
3 ELSE FAC(X, Y) =
4   FAC(X, Y/2) *
5   FAC(X + Y/2 + 1, Y)
```

The * in line 3 indicates that the two FAC functions are to be multiplied together.

The point of the algorithm is that it continually splits the problem into two, until it is multiplying sets of adjacent numbers. Then the recursive calculation shrinks back, piecing together the fragments until it arrives at the one number which is the finished result.

Algorithms to beat exploit parallel hardware will have to be capable of being split in this way.

GURD... Users dissatisfied with current vector array processors.

COMPEC NORTH '82

Belle Vue, Manchester
June 22-24, 1982

Tuesday: 10.00-18.00
Wednesday: 10.00-18.00
Thursday: 10.00-16.30

The most comprehensive computer exhibition in the north is on again soon in Manchester.

For computer users, suppliers, systems and software houses, consultants — anyone who is professionally involved with computers — this is the ideal opportunity to see and compare the whole range of equipment and services.

A day at Compec North is the most effective way of bringing yourself up to date in today's computer market.

MAKE A NOTE TO VISIT

Admission is by business registration and costs £2 at the door, OR

SAVE TIME AND MONEY

by sending now for FREE advance tickets.

COMPEC NORTH is a Computer Weekly exhibition. Organised by IPC Exhibitions Ltd.

PUZZLER

AN athletic-minded systems analyst decides to carry out "trials" at the Underground station walks down the moving escalator at his normal pace, and takes 50 seconds to reach the bottom. Next, having renounced to the

top, he runs down the escalator three times as fast as he walked (once again taking one unit of time). At this greater speed the number of strides taken to reach the bottom rises to 75.

How many steps are showing on the escalator? See page 46 for solution.

PEOPLE

Baric MD appointed after meteoric rise

BARIC Computing Services has appointed Chris Gent managing director. It was a swift climb to the top for 34-year-old Gent, who joined the ICL/Barclays Bank owned company three years ago. Gent has also been made a divisional director of ICL.

Gent started with Baric as market development manager and promotion to manager of strategic sales and later product marketing

manager followed. In his role as product marketing manager Gent took responsibility for defining and implementing the company's market direction after the launch of its nationwide computer services.

Former Baric MD Keir Hopkins was appointed manager of ICL's applications systems division in March, and Gent has been acting general manager since then.

Nexel promotion

NEKEL, the company formed to take over the service business previously done by Nexos Office Systems, has a financial director. He is Tony Morgan, a chartered accountant, who worked for 10 years with Touche Ross latterly as manager of the Bristol audit department, before joining Nexos as financial controller two years ago.

BEAMA chief

THE British Electrical and Allied Manufacturers' Association, BEAMA, has elected Gordon Gaddes as its director. Gaddes is the director-general of the Institution of the Electrical Engineers, and has been deputy director-general at the CBI. Gaddes is the BS's director of information services, marketing and resources.

Hans de Lange has been named general manager of Rair's French subsidiary Rair SARL. He has acted as an independent European advisor to French and UK computer companies for several years, and has also worked for Burroughs for eight years - one year based in Saudi Arabia and seven in Amsterdam as Burroughs' branch manager. Rair has companies in the US, UK and West Germany as well as the new French subsidiary. One of de Lange's tasks is to recruit more sales and sales support staff to handle and boost current French sales of about 20 Black Box microcomputers a month.

NCC man for IT city

ERIC BIRD has been appointed manager of the Milton Keynes Information Technology Exchange. Bird was with the National Computing Centre for ten years, where he served as head of education and training, director of the NCC Threshold scheme and manager of the microsystems centre. He served on the Manpower Sub-Committee of the NEDO Computer Sector Working Party from 1979-81.

The Exchange, which is to open later this year, is designed as the centre of a plan which is aimed at making Milton Keynes 'the leading city in Europe for the introduction of IT as an integral part of the business and domestic life of the community'.

It is to act as a focal point for the business community, providing information, training and a real outlet for technology related products.

Cricket

CW v Logica CW won by 7 wickets

Sam Samuel, previously a product specialist with Modcomp, has joined Rank Data as service manager. Sales executive Mike James has also joined Rank Data, from Perfec.

Eric Cole has left Data Recognition, where he was

national sales manager, to join DKS as an OMR system sales executive.

Bob Dunn has been appointed sales manager for Distributive Computer Systems of Coventry. Previous experience includes 10 years with Honeywell.

Nick Marshall, previously a sales manager with Control Data, has joined CTL as a senior sales executive covering Greater London and Essex.

Alwyn Jones of the City University Business School has been appointed deputy dean.

Ray Paqualone has been named vice-president of operations at the peripherals division of Perfec. He joins the company from Clair where he was VP of operations.

Patric Curwen, who until recently was with Logica VTS where he managed various projects in the Office of the Future operation, has joined CAP as office systems group manager.

Paul Freezer has become a senior sales engineer with ATS Telemetry. He was last with Cosor, where he played a leading role in the development of micro-based telemetry systems.

Bill Winter, until recently operations manager of Westinghouse's advanced technology labs in Baltimore, Maryland, has joined Storage Technology as vice-president and general manager of its microtechnology division in Boulder, Colorado.

Michael Northey has been appointed to the new position of sales manager with Chemiceff Telecom. He was formerly responsible for UK sales of line printers and OEM sales of disc drives at Teleprinter Equipment.

Ian Hillier-Brook, previously European marketing manager with Centronics, has joined System Industries Europe as operations manager for Europe.

Manfred Scheurer has moved to Shugart as regional marketing manager for Northern and Central Europe, replacing Wolfgang Scheerer who has become managing director of Synce. Scheurer was previously Central European sales manager for Zilog.

Mike Gardner has been appointed sales executive with the micro systems division of Newbury Labs. His last job was as manager of the Telecomputing bureau in Oxford.

Henry Montgomery has been appointed to the newly-created post of executive vice-president and chief operating officer with MicroPro in San Rafael, California. He was previously president of his own management consulting firm.

Hoskyns boss

TONY ROBINSON has been appointed managing director at Hoskyns Group. He succeeds Jim Freney, who in his six years as MD saw the company grow from UK sales of £3 million to anticipated sales of £25 million this year. Freney is now pursuing other business interests.

Robinson joined Hoskyns in 1967 and has recently been managing director of one of the three trading companies in the Hoskyns group, Hoskyns Systems.

New MAI address

MAI has opened a second Midlands office in Birmingham. Manager is Stuart Smith, who joins from C1 Europe as Midlands business manager.

The address of the new office is: Scala House, Holloway Green, One-way, Birmingham B1 1EQ. Tel: 021-633 8117.

CONFERENCES

ELECTRONIC Privacy and Authentication Technology is the title of a two-day workshop to be held at Hatfield Polytechnic on July 19-20. The topics on Day One will be public key systems, authentication, protocols and related topics. On Day Two DES and other algorithms, software protection, speech systems, standardisation and related topics will be discussed. Accommodation will be available. Details from Mrs Jill Stern, Administrative Assistant, tel: Hatfield 68100, extension 386.

THE Second British National Conference on Databases will be held at the University of Bristol on July 7-9. Although intended to focus on British research, it will include three invited papers by international speakers: New Trends in Database Systems by Michel Adiba of IMAG, Grenoble, France; Aspects of the Functional Data Model by Peter Buntman of the University of Pennsylvania, US; and Null Values by Chris Date of IBM, San Jose, California.

US. The conference is organised jointly by the computer science departments of Aberdeen and Bristol Universities and by the BCS. Further details from Dr M. J. R. Shave, Dept of Computer Science, University of Bristol, Bristol BS8 1TW. Tel: Bristol (0272) 24161 ext 846 (mornings only).

AN international conference on Man/Machine Systems has been organised by the Institution of Electrical Engineers and will be held in Manchester on July 6-9. Its aim is to explore the problems, both technical and social, associated with the interaction between men and machines and it is hoped that a balance has been achieved between technical and social factors, large and small systems, and practical experience and research. Some topics to be discussed are: System Design: The Human Component, I/O Methods, Aids for the Handicapped, Communication Systems, and Introducing New Systems.

An exhibition has been organised to run in conjunction with the conference. Further details can be had from Christina Duggan, Press Office, IBE, Savoy Place, London WC2R 0BL. Tel: 01-240 1871.

IST, Manchester. Details IEE 01-240 1871.

Second British national conference on databases, ABCD-2. ICS/Universities of Aberdeen and Bristol. Bristol University. Details Dr M. J. R. Shave 0272 24161 ext 814 (mornings).

Fifth generation international conference. ICS Expert Systems Group/SPL. Royal Garden Hotel, London. Details SPL 0235 24112.

COMPUTASTARS - SECOND LONDON HEAT

by Andrew Thomas

Rank Xerox - poised to take second place.

Gerry James sprints Rank Xerox towards a commanding lead.

Sun shines on the capital as Ford and Rank Xerox blaze to victory

Martin Ellison - pain in the diodes.

Bank time in the steeplechase.

AN untypically hot and sunny Bank Holiday Saturday was the setting for the third 1982 Computastars heat at Barnet. This was an overflow heat, added to the programme to accommodate the large number of London area computer departments wanting to enter the annual 'DP Olympics'. As such it involved only 16 teams, but the competition and the volume of the supporters were well up to standard.

The javelin put in its first 1982 appearance, and supplied me with my most hazardous assignment to date - standing in the danger zone to supply action photographs. John Watson, Number One of the London Borough of Barnet 1, put in an excellent performance on his home territory, winning the individual event and helping his team to victory.

In the women's competition, Rank Xerox beat the Bank of England into second place by a convincing margin of 40 points to 23. Bank of England Number One Anne Terry also took the individual lead after the first event.

Sponsored by Computer Weekly

Also seen for the first time this year was the rugby relay. This event would take most of this page to describe accurately, so suffice it to say that it involves a lot of kicking, catching, cursing, carrying and confusion.

Ford 1 displayed either the greatest degree of skill or luck, narrowly beating Logica 2 into second place, with Barnet 1, Rank

Xerox and Gonzalez Byass tying for third. The women from Rank Xerox beat Bank of England by 45 points to 30, and Gonzalez Byass women showed that rugby was not really their strong point, scoring just six points.

Golf, however, proved to be more to their taste, the team beating Bank of England and Rank Xerox into second and third places respectively. Eileen Standing, Number One of the victorious Fawley Byass team, also won the individual competition.

Best male golfer was Ford 1, but Logica also appeared to speed a considerable amount of time on the greens, taking second and third places with its two teams. Logica 2's Number One Philip Edge, was best individual puttsman.

Jumping sideways across a hoard in a temperature of 75 degrees is not one of the most relaxing pastimes, but Rank Xerox grinded its teeth and beat Wimpey into second place by the slender margin of one point, the Wimpey men's best performance of the day.

Xerox's Number One Kartar Davstwal, was best individual jumper. Xerox women duplicated both their male counterparts teams victory and individual success.

Ford 1 proved to be the driving force in the men's 100 metres, beating joint second placed Logica 2 and Bank of England 2 by a six-point margin. Bank of England Number One David Vorberg gave everyone a good run for their money to take the individual lead over Grant Mansfield of Ford 1.

Rank Xerox and its Number One Anne Terry again took the top placings in the women's heat.

The team and individual placings in both the men's and women's competitions after five events were to remain unchanged to the end of the competition. Rank Xerox women had a colossal 71-point lead over second placed Bank of England.

By the end of the afternoon, the difference had been stretched to no fewer than 137 points, leaving no doubt as to which women's team would be appearing in the Birmingham finals. Anne Terry took

Photography can be dangerous.

the individual title despite having to take part in the steeplechase with a pulled muscle.

Ford 1 drove on to victory over the men from Rank Xerox, and Grant Mansfield beat John Watson into second place in the individual competition. Small unit entrant Gonzalez Byass also goes to the final (nothing at all to do with its presentation of Champagne to each team), as do the veterans of Barnet 2.

Grant Mansfield - second in the putting and 100 metres.

ANNOUNCING A NEW SERIES OF ONE DAY DATA COMMUNICATIONS SEMINARS FOR MINICOMPUTER USERS

WHO SHOULD ATTEND?

If you use a DEC, DATA GENERAL, HEWLETT PACKARD or any other Minicomputer and wish to connect to remote terminals - then this Seminar is for you.

The aspects of data communications most relevant to the Minicomputer user are presented in layman's language.

The Seminar is directed towards the user.

It requires no engineering background.

ENROLMENT INFORMATION

COSTS: £46.00 Inc. VAT (includes refreshments, lunch and seminar handbook).

VENUES: JULY 11th - HEATHROW JULY 16th - MANCHESTER

Seminars are held in major cities throughout the UK during the year.

Please mail me further seminar information:

PRODUCTS

New-breed terminal table

THE Martela-Conti terminal table has been developed for the new breed of low profile word processor and computer keyboards and VDUs.

Designed to be used in conjunction with the standard height Conti desk range, the height of the keyboard table is adjustable between 60 and 76mm, with further variations available for the screen table level and angle.

Extra work areas are available and are simply bracketed to the main unit.

Unique construction features substantially reduce vibration and noise transmission, says Martela.

Conti terminals are finished as standard in white or cream and are on immediate delivery. Wood finished surfaces are available to order.

Prices start from about £165 for a totally integrated terminal and desk system.

Martela Contract Interiors, a subsidiary of Martela Oy of Finland, offers a wide colour range, and a complete office design and

The Martela-Conti terminal table.

installation service.

Martela products can be inspected at the company's showrooms in Holborn, London.

Martela Contract Interiors (CW), 210 High Holborn, London, WC1V 7BP. Telephone: 01-831 8771.

Training system features colour and graphics

INTELLIGENT Systems, manufacturer of colour graphics computers and terminals announces CATS-80, its computer augmented teaching system. The product is aimed at the educational and industrial training markets.

Product manager Peter Curnin says, "These markets have been seeking a system which combines ease of use, effective instructional methods and low cost. CATS-80 satisfies these requirements and adds the instructional power of colour and graphics."

A typical course written on CATS-80 presents information to the student in any of several formats. A "Preset" presents the materials to be learned, asks questions and supplies answers. A "Review" utilises the branching capabilities of CATS-80 to present information based on student response to questions.

If a student successfully answers questions on the material presented, the course branches to new information. If the student is not

successful, the course repeats information and questions or branches to a remedial mode. Three test modes "Quiz", "Test", and "Final" select questions randomly on previously-presented material.

Curnin believes that "virtually any subject is suitable for presentation through CATS-80 course, from foreign language to geology to electronics. And courses are easily written even by first-time computer users."

Intelligent Systems is offering a special author incentive programme for prospective course authors to buy a complete CATS-80 system for \$2,995. The system includes the 3651 colour graphics microcomputer, 32K memory, the CATS-80 authoring software with documentation.

CATS-80 is available within 30 days of order.

Intelligent Systems Corp (CW), 225 Technology Park, Norcross, GA 30092. (404) 449-5961.

Controlled camera

A COMPUTER controlled camera system for automatic production of 35mm slides and prints from colour or monochrome digital images has been introduced by the Graphic Display Systems.

The GDS-1700 Auto takes the Nikon F3 camera mounted behind an optical hood, mounted to the display, with camera operation under computer control through a camera interface with triggering designed to suit the user's specification. Cameras other than the Nikon F3 can be accommodated on request.

Application areas include: research and CAD/CAM. Graphic Display Systems (CW), 76 Fenningford Rd, Cambridge CB1 3EZ. Tel: (0954) 210466.

STC's Tele-check card authorisation terminal.

Self-checking electronic funds transfer device

TELE-CHECK, the company's second generation electronic credit authorisation terminal, has been announced by Standard Telephones and Cables. It deals with the charge, credit or bank cheque cards of up to 10 card companies, incorporates a normal telephone with rotary dialling and automatic re-dial, and is self-checking by means of a built-in diagnostic program.

For credit authorisation a card is passed along a slot at the rear of the Tele-Check unit, the amount of the transaction is entered on the keyboard and the "proceed" button pressed. The unit reads the magnetic stripe on the back of the card to identify the database and the individual account, and automatically dials the host computer or authorisation centre.

A 32-character display on the unit shows the required operator action at each stage.

Where the magnetic strip is damaged or absent, the embossed card data can be read by the operator and entered via the keyboard. The unit has an automatic sequence check for the keyboard entered data.

Seconds later, the response from the computer or authorisation centre appears on the display and will normally be an instruction to complete the transaction.

If the computer decides the personal assistance is needed from the authorisation centre, the unit will automatically dial the appropriate number and connect the user to the handset of the integral telephone.

Features of Tele-Check include full alphanumeric data entry and editing on some local input data. Standard Telephones and Cables (CW), 190 The Strand, London WC2R 0JH. Tel: 01-831 8055.

Text storage costs cut

A TEXT store module for the Series 5000 range of high resolution raster graphics terminals and OEM generators is announced by Sigma Electronic Systems.

Text store modules are interchangeable with pixel stores allowing the user to configure a terminal or generator with the graphics/text mix to suit the application. Previously users have had to use up valuable pixel store for text display tasks, thereby reducing the cost-effectiveness of the unit.

Sigma Electronic Systems (CW), Sigma House, North Heath Lane, Morden, Surrey RH12 4JZ.

Intelligence for Micropad

AN addition to the range of Micropad hand print data entry terminals has been made with the introduction of the Micropad Intelligence.

This enables the user to operation documents by the unit without need within the unit without need for programming skills. Any number of input forms may be generated, stored in the unit and called up by the user.

Micropad prices range from £295 with various optional features; intelligence costs £150. Quest CIE (CW), 100 The Strand, London WC2R 0JH. Tel: 01-831 8055.

SOFTWARE MONTH

DEC software takes new direction

IN April Digital Equipment, DEC, announced a scheme to assist third party software suppliers to sell to users of DEC hardware. It also set up a directory of digital software called Digital Classified Software.

But some independent software suppliers have been selling successfully into DEC's customer base for a number of years without the benefit of such a scheme.

Woodoo, Jeffreys and Partners, for instance, saw a gap in the market created by insufficient facilities on the RSTS/E operating

system, particularly in the case of its file structure. The company's proprietary operating system, Multi-User System for Interactive Computing (MUSE-11) is a DEC lookalike of the standard operating system for Prime minicomputers, Primos.

Another DEC OEM, Koren Computing, recognised that users faced a major obstacle if they wanted to move programs and data from one operating

system environment to another on the PDP-11 minicomputer range as a result of DEC's philosophy of providing separate operating systems to cater for specific market sectors. Koren's IPL-11 Interprocessor Link handles asynchronous communications over leased or telephone lines between processors.

DEC's commercial strategy in the past decade has centred on vertical market segmentation, but

a change of direction was needed for it to achieve its declared goal of becoming the world's largest computer supplier. The company has had to supplement its own internally developed applications software to make inroads into new markets.

The Digital Classified Software scheme is an extension of DEC's earlier referral policy. Previously a formal association with the software supplier was

avoided. But the new marketing venture entered into by DEC will involve it in evaluating products and the commercial viability of suppliers.

DEC will now actively look for gaps in its software range and look to outsiders to supply the solution. Far from relinquishing control over software development, DEC will be able to determine which operating systems it wants applications to

be developed for. DEC's launch of a new bottom-end 32-bit minicomputer, the VAX 11-730 at a price comparable with the 16-bit PDP11-44, aims to consolidate the DEC user base on to a single operating system, VAX/VMS.

Currently the most widely used PDP-11 operating system for multi-terminal use is RSTS/E, and DEC is wary of attempts by Perkin-Elmer, a rival 32-bit minicomputer manufacturer, to move RSTS/E users to its own machines and single 32-bit operating system.

Applications from newspaper systems to scientific research

DEC minis have a key role in a variety of markets David Casey reports

been the high degree of compatibility maintained over more than a decade. In launching the PDP-11/20 (the 11/15 for OEM markets), twelve years ago, DEC was filling a gap between the 36-bit DEC System mainframes and the 13-bit PDP-8.

Series 8 had become a "mature" product with a finite commercial life: the PDP-11 was planned as the principal revenue earner of the middle and late 1970s.

The PDP-11/20 was not the first 16-bit minicomputer, but it pioneered the use of a single bus architecture (the Unibus) for that generation of machine. An integrated instruction set controlled I/O operations and memory, its 16 address lines enabling it to look at 64 Kbytes of memory.

Second generation PDP-11 machines attacked the mini market at two points: the 11/05 retained the same performance at a lower price, while the 11/35 increased the processing power per pound. Incorporating memory management on the 11/35 supported 18 address lines and access to a memory of 256 Kbytes — a fourfold increase from the 11/20.

The impact of the larger memory capacity was not fully realised until

the introduction of significantly cheaper machines. The ubiquitous PDP-11/34 appeared to fill this role.

Production of 11/34 variants will continue even though the system has been discontinued as DEC's front-line mini. For OEM suppliers, however, its replacement would involve extensive redesign of end-user products.

As the workhorse of the DEC mini range, the 11/34 has proved an exceptionally robust machine. Examples of this system operating under the most adverse conditions are legion. Tote Computers — the DP division of the Tote Board — runs 14 11/34s to process gaming stakes on racetracks around the UK. Systems are taken by lorry to race meetings; the problems are minimal. The Tote's only concession to hardware security is running pairs of processors in parallel.

A quarter-megabyte of memory is the maximum address space that can be managed on an unmodified 11/34. (In OEM applications, additional hardware extends the memory mapping to two megabytes or more). With a further four address lines, providing access to a total of four megabytes of memory, the 11/70 represented a

significant advance on the PDP-11/45, a high performance version of the 11/35.

For relatively small extra cost, the 11/70 offered cache memory and DEC's Mosibus. The Unibus alone had proved inadequate for

the tasks that could be handled on a processor loaded to the capacity of the 11/70: as the size of the memory increased, and further discs and tape drives were added, the Unibus performance deteriorated rapidly.

A 32-bit data highway — the Mosibus — provided a totally transparent channel for the transfer of data within the system. To the user, the operational speed of a 32-bit machine was available on conventional 16-bit architecture.

Only one of DEC's PDP-11 series was designed for a specific marketplace. The 11/55, supporting Fortran and a high-speed memory, was intended for scientific applications. It proved an effective marketing tool as an entry to other DEC systems. Armed with an impressive benchmark performance on the 11/55, DEC was able to secure invitations to tender in the technical market. With this opportunity to bid, it

PRACTICAL COMPUTING and YOUR COMPUTER present

THE Northern Computer Fair

Personal computers
Home computing
Small business systems

When the first Computer Fair was held in London in April this year, 38,500 people crammed into Earls Court to see the latest advances in small business and home computers.

Now the sponsors, Practical Computing and Your Computer, are running a similar event in Manchester.

Local computer clubs, software houses and the manufacturers and distributors of personal computers will have the opportunity to meet with the growing number of business users and enthusiasts in the North.

BELLE VUE, MANCHESTER
NOVEMBER 25-27, 1982

SOFTWARE MONTH

David Casey reports on the marked shift in DEC's marketing policy, aimed at warding off growing competition

Digital Equipment emerges as a single-source supplier

TURNING boardroom objectives into commercial reality can be a nightmare for a multinational computer manufacturer. The effect of adverse exchange rates and resistance from introspective national governments add to the problems of marketing in a recessionary world economy. When a turnover measured in billions of dollars is involved, subtle changes in local conditions are reflected as seven-figure variations in profits.

A marked shift in Digital Equipment's marketing policy during the past year in its attempt to ward off competition from the major international systems suppliers and the growing number of independent suppliers flourishing under advanced technology subsidies.

From its former role as a hardware manufacturer supporting a narrow range of proprietary software products, Digital Equipment is adopting the stance of an integrated single-source supplier.

The acceptance of minicomputers and 16-bit micros as convenient systems for smaller business applications, has brought to the marketplace a different type of purchaser from the DP professional of the 1970s. The new generation of customer, using the computer as just another management tool, demands a total solution from a supplier — every facility from systems analysis to office consumables must be available.

DEC's commercial strategy for the past decade has centred on vertical markets, oriented towards the sale of its hardware. Reputations

were established during that time in key industry sectors.

To achieve its long-term target of being the largest computer supplier in the world, DEC has needed a change of direction. It was recognised that applications software should be developed internally for products which would preserve DEC's share of an existing sector, or make inroads to a new market.

Joint marketing arrangements with independent suppliers are intended to provide access for the company to specialised industry areas. The recent involvement with Ferranti Ceteq in CAD systems on the VAX-11/730 indicates the type of co-operation that the company envisages.

On a second front, closer ties are to be forged with software houses through a scheme described in the UK as Digital Classified Software. As an extension of DEC's earlier referral policy — in which a formal association with the software supplier was avoided — the new marketing venture involves the evaluation of products and their originators.

Mike Wright, UK applications

products manager, outlined the company's approach: "We accept that we cannot offer every item of software required by the customer. But it is equally unacceptable to continue referring users to a third party for these products, when there is a chance that a company might not even be trading tomorrow."

The concept of Classified Software is simple. DEC will take the initiative to identify products for the scheme if a gap exists in its own range, and the company is not prepared to invest in software development.

Wright expects software producers to offer a further tier of packages which supplement DEC's in-house products.

Through whichever channel the software is accepted by DEC, the product will be subject to evaluation, with review levels ranging from an overview to a high-level check on functionality and documentation.

Whether the scheme will prove viable will depend on the agreement that DEC can reach with the independent supplier. From guidelines indicated by Wright,

the mechanism appears to be flexible: "While the objective would be to secure exclusive marketing rights worldwide, the contract would have to be negotiable."

Internal software development, and the packages taken up by DEC under co-operative agreements, will indicate the company's product strategy for the next five years.

Within the framework of system software for the PDP-11 range, a definable market exists for independently developed operating systems. The TSX extension to RT-11, from S&H Systems of Nashville, has no direct competition from DEC in a potentially lucrative sector of the market.

Since a basic RT-11 licence is required to handle TSX and its successor TSX PLUS, the product can be viewed by DEC as an OEM package to increase the functionality of its existing systems.

For DEC to promote TSX under any of its joint marketing schemes would negate many of its efforts to standardise RSX-11M as the main-line PDP-11 operating system.

DEC's executive Professional

300 micro series has adopted PDS, single-user version of RSX-11M, rather than RT-11. The range, based on a 256 Kbyte 11/23 chip, is being marketed as a dual-purpose device — functioning as a standalone system and as a distributed workstation. A marketing agreement recently concluded by DEC with Micro Focus indicates that a further target for the Professional is the system development market.

DEC's decision to introduce the new VAX-11/730 supermini at a price comparable with the 11/44 will switch the focus from RSTS/E to VAX/VMS as the general-purpose timesharing system on multi-terminal installations. No less significant is the grouping of the company's Office Plus programme around the VAX-11 range.

Word processing, DP and an information retrieval system are to be supported by typesetting software, and the complete range of DEC's communications facilities. Much of the software development for Office Plus will be the responsibility of independent suppliers offering products under the Classified scheme.

DEC's Wright has set a goal of a thousand applications packages under VAX/VMS many of which will be directed towards the office market.

The highly successful RSTS/E timesharing system is destined to be the next in-house product undergoing a major facelift. A system software supporting the majority of PDP-11/70 and 11/85 machines, the existing RSTS/E system will be a product without an application. An economy revision of RSTS/E for the 11/85 machine should be seen as a "holding" move while a more user-friendly variant of RSX-11M are developed.

Software pricing policy directly affects DEC's success in some of its most important markets. Introducing high performance machines like the VAX-11/730 without a more realistic approach to software charges — will guarantee demand from the domestic sector. With manufacturing plants in the UK, Digital Equipment is able to qualify as a "British" manufacturer while deriving from publicly funded customers.

A sensitive response to the needs of its worldwide customer base — both the commercial enterprise and public authority — can achieve for DEC its target of Number One systems supplier. The programme of co-operation with independent suppliers is a step in the right direction, provided that fair and reasonable terms can be negotiated.

As an independent software house, Turnkey has confidence in RSTS/E. Sully commented: "If one of our systems does not work, the problem is to find out whether it is the operating system or the software. If we are working with RSTS/E we know it must be our software."

RSX-11M is a multi-tasking real time operating system serving the middle of DEC's PDP-11 range. The product was designed to give guaranteed response irrespective of the task. If a real time application is to be executed, RSX will suspend other tasks as required.

The RSX-11 series (RSX-11M, RSX-11S, RSX-11M PLUS) is appropriate to scientific and technical users, with programming experience. It is not a "forgiving" system when commands are entered incorrectly.

The key feature of RSX-11 is the ability to handle multiple programs creating applications simultaneously with no risk of interruption. RSX-11M is supported by DECnet data communications software.

RSX-11M Plus is an enhanced version designed for the 11/44 and 11/70 and of the range, particularly suitable for non-specialist environments.

DSM can operate on any PDP-11 computer to the 11/70.

Digital Standard Mumps

DSM is a highly specialised operating system which will only support the Mumps language — both products being the result of development at Massachusetts General Hospital in medical records systems. The commercial product has a limited number of applications in non-medical database systems.

DSM can operate on any PDP-11 computer to the 11/70.

INDEPENDENT OPERATING SYSTEMS

Multi-User System for Interactive Computing (Music-11) was conceived by Wootton, Jeffreys and Partners, as a DEC look-alike for Primos, the standard operating system for Prime minis.

It is a time sharing operating system which provides interactive facilities for multiple users on DEC minis and micros. Music fully emulates RT-11 functions, allowing a background RT-11 program without modification.

RT-11 and CTS-300

Designed as a single-user system for real-time operation, RT-11 is available with three different monitors:

● Single Job, which provides control for single-user, single-program conditions and runs on a minimum of 24 Kbytes of memory. Suitable for handling high rates of data transfer in real time.

● Foreground/background, where a secondary task can be handled in background while principal task is pending. Foreground jobs have higher priority — the system returns from background when required.

● Extended memory, which extends logical program space of foreground and background to a maximum of 248 Kbytes. Extended memory is allocated dynamically between programs.

Release 5 of RT-11, expected within a year, is likely to be the last version of the system. DEC regards this as a "mature product" which will only be modified to accommodate hardware developments.

CTS-300 is a commercial implementation of RT-11 designed for integrated DEC Data system 300.

Both support 22 address lines giving access to four megabytes of memory. The lower priced PDP-11/23 can handle only a third of peripheral devices, however, the 10-Mbyte XL11 is the largest Q-bus disc computer with the high capacity Winchester available on the 11/24.

About half the traditional PDP-11 range will be taken by the 11/24 over the next five years, the remainder will move up to the 11/44 — the system which will be the upper end of DEC's micro market, taking over many of the 11/70 applications.

With five products based on Q-bus (Palo Alto, Professional, 300, 11/03, 11/23 and 11/23+), the micro end of the 11 range is again an essential element of DEC's smaller business marketing. One

of these systems, the 11/23+, overlaps the performance of the 11/24.

A guide to DEC operating systems

MAINSTREAM RANGE

RSTS/E and CTS300

RSTS/E is a multi-user time sharing system designed to handle 63 jobs and 124 terminals. Carrying the Basic-Plus run-time system and compiler as standard, RSTS/E supports a wide range of languages, including Fortran IV, Basic-Plus-2 and Cobol.

The system is set up so that each user appears to have the computer dedicated to his application. Provided that the system is not overloaded, time sharing is transparent.

RSTS/E is used extensively in education, as it is extremely secure. It provides total isolation between users and is therefore ideal for the commercial time sharing market.

CTS-300 is a commercial "packaged" system which combines RSTS/E with appropriate languages and data management software. DEC describes RSTS/E as being "forgiving", i.e. capable of withstanding handling by programmers. This view is shared by Derek Sully, managing director of Turnkey Systems, distributor for the Lexiboss Information Retrieval System. "We can rely absolutely on RSTS/E working. It is probably the most developed of the DEC operating systems. You cannot crash it without trying very hard."

As an independent software house, Turnkey has confidence in RSTS/E. Sully commented: "If one of our systems does not work, the problem is to find out whether it is the operating system or the software. If we are working with RSTS/E we know it must be our software."

RSX-11M is a multi-tasking real time operating system serving the middle of DEC's PDP-11 range. The product was designed to give guaranteed response irrespective of the task. If a real time application is to be executed, RSX will suspend other tasks as required.

The RSX-11 series (RSX-11M, RSX-11S, RSX-11M PLUS) is appropriate to scientific and technical users, with programming experience. It is not a "forgiving" system when commands are entered incorrectly.

The key feature of RSX-11 is the ability to handle multiple programs creating applications simultaneously with no risk of interruption. RSX-11M is supported by DECnet data communications software.

RSX-11M Plus is an enhanced version designed for the 11/44 and 11/70 and of the range, particularly suitable for non-specialist environments.

DSM can operate on any PDP-11 computer to the 11/70.

Ada — good prospect for long-term survival

WE all know that languages like Cobol and Fortran have their faults, but equally we have seen the comparative failure of better languages like PL/I, Pascal and Algol. And now we have another contender — Ada.

It seems that there is something special about Ada. The language has powerful backers, and it is going to save a lot of people a lot of money.

In fact, Ada has a good chance of becoming widespread in the software world, especially for engineering, scientific and real time applications. Indirectly, it will probably make an impact on other people and organisations producing software, such as DP, because package vendors will choose it as an implementation language.

So, what is Ada? Basically, it is two things: a high-level language, similar in appearance to Pascal or Algol 68; and an "environment" — an integrated collection of utility programs which will make the lives of development and maintenance teams a lot easier.

For example, these include a clever text editor, interactive debugger, a file structure and utilities, and a module control or configuration management system.

So far, only the language has been fully defined. It is likely to become an ANSI standard this summer. Dr Lee Blaine, consultant and resident Ada expert at a major defence contractor, describes the current state of play: "Compilers are being written right now, and full compilers should become available by early 1983, including the VAX (mini) and some of the more powerful 68000-based micros."

"During 1983, I expect compilers to become available for a wide variety of machines, from 11M minis to personal computers."

As for the software development environment, several organisations are producing their own versions. These will also begin to appear by early 1983. Moves are afoot to standardise these but no agreement is in sight.

Indeed, there may well end up being multiple "standard" Ada environments, or no standard environment at all. In any event, even the most minimal environment standards are unlikely before 1984 or 1985.

The main motivation behind the language itself is simple: economics. Software costs far too much to develop and maintain. To alleviate this, Ada's designers focused on a number of the major causes, notably maintainability, portability, and ease of development.

Maintainability. As any software manager knows, the expenditures of software maintenance are

pre-hend too many details at one time. The solution to this is to provide a language which easily permits development to be decomposed into many smaller tasks, which fit together in a conceptually clear way.

An explanation of how Ada works would require a technical discussion beyond the scope of this article. What counts is that Ada represents an advance in solving these central problems of the software industry.

However, for the benefit of readers familiar with obscure jargon, here is a list of reasons for Ada's maintainability, portability and ease of development.

● Strong data typing.

● Extensive support of separate, closely integrated module compilation.

● Provision of a wide variety of flexible control structures à la Pascal.

● User defined data structures.

● Allowing implementation details to be hidden.

● Support for concurrent, co-ordinated tasks.

● A macro-like facility to define entire sections of code generically.

● Great efforts to provide a comprehensive semantic definition of the language.

In addition, a variety of less

technical methods are being used to achieve the design goals. For example, an unproven technique has been established which for a small fee will test compilers to check that they do not deviate from the standard, and have no extensions.

The name "Ada" has been reserved, and vendors will not be allowed to use it until they have passed the verification process, or make strong commitments to do so.

The technical strength of the language may recommend it highly, but Ada's proponents — notably, the US Department of Defence (DoD) — recognise that these strengths alone are not enough to ensure widespread usage. A number of things are being done to help Ada on its way.

For a start, the defence industries of the US, and probably the UK and major European countries, will be required to use the language. Large amounts of money are involved, so the aerospace and related engineering communities will be obliged to get up to scratch quickly.

In the engineering world, programming staff tend to move around, so within a few years this section of the marketplace should be accustomed to Ada.

More subtle marketing techniques are also being used. Ada is being developed in such a way that the "not invented here" syndrome is minimal — especially important if Ada is to catch on in multiple countries.

The name "Ada" also reflects the marketing sensitivity of its proponents. It is a cute name, with a cute tale behind it — romantic stuff about an attractive young English aristocrat, dubiously claimed to be the first programmer ever.

The environment, too, are likely to influence matters. They should be attractive to staff accustomed to patching together an unco-ordinated set of development tools. Since the environments will be written in Ada, they should be fairly easily made available on a wide variety of hardware and operating systems.

Clearly, education presents a hurdle. The defence related industries will create a good marketplace for classes, and trade media — at least the engineering-oriented ones — will start running a lot of articles. Because of the convenience and instructive value of its environments, and because Ada reflects the state of the art, many universities will teach the language to students.

One way or another, from 1983 onwards, Ada training should not be hard to come by. However, consultant Blaine warns: "Organi-

sations will have to plan carefully in retraining their staff... it's not going to be a simple matter of throwing money at it and hiring people off the street."

Beyond the defence community, where is Ada likely to become popular?

It appears that by 1990, the language will be in common use among engineers and the scientific community. Blaine agrees, adding: "It is worthwhile noting that despite the great interest being shown by defence firms, they are far from being in the majority. People giving seminars report that about 50% to 60% of their attendees come from process control organisations, with only about 20% or 30% coming from DoD-type contractors."

Software vendors are likely to use Ada, because its portability will enable them to sell to a larger marketplace. The vendors are painfully aware that today we are far from having achieved general standards in hardware and operating systems.

Ada's prospects must surely be less rosy for traditional 11M applications. For the moment, the language is woefully lacking in necessary facilities such as sorts, DBMS and formatted screen I/O. The designers intend these to be provided in time by third party organisations, which is reasonable.

This means that the facilities will not be readily available for several years, so serious DP usage will not be possible until then.

But even when these essential ingredients appear, DP will still probably hold off. The current tendency is either to use Cobol, or to use ultra-high level interpretive languages such as Focus or Natural.

In either case, Ada is left out, although this is not to say that DP will not use components of the Ada development environment, or products written in Ada.

David Ferris

David Ferris is a software consultant based in the US and the UK. Covering technical, marketing and general business issues, he has worked with hardware, software and venture capitalist firms.

XOREN IPL

THE SOFTWARE PACKAGE WHICH ENABLES YOU TO TRANSMIT FILES TO REMOTE SITES OVER EITHER A DIRECT LINE OR A TELEPHONE LINE USING STANDARD ASYNCHRONOUS TERMINAL PORTS (DL-1, DL-2, DL-11, DL-11C).

XOREN IPL enables files to be transmitted over either a direct line or a telephone line using standard asynchronous terminal ports (DL-1, DL-2, DL-11, DL-11C). Full communications error-checking ensures error-free transfers even over noisy lines.

Versions are available for:
RSK-114, RSK-114 PLUS, IAS
RT-11, CTS-300
RTS/E, CTS-800
VAX/VMS, TSK, TSK-PLUS

International Support
Analyst/Programmer6-12 months in Australia
Then Maldenhead BasedA really unusual and very exciting position offering international travel and
the prospect of progression to managerial status. A major air freight company,
part of a large international shipping group, offering excellent conditions and a
bright future.A new PDP11 is shortly to be installed in Melbourne and this person will be
responsible for supporting a newly implemented accounting system on the new
machine during the first 6-12 months of live running. Helshe, who is probably
currently of single status, will then return to the UK and will become largely
responsible for supporting the company's standard computer applications.

In the first instance, telephone Myriad on Reading 585802 or write to the address below.

c. £10,500
+ BenefitsIf you have experience on DEC PDP11 with RSX11 and BASIC +/2, then
you could winter in Australia and return to the prospect of further key
assignments in line with the on-going implementation of the company's
computerisation programme.As further machines are installed, both in the UK and overseas, and the
company's standard Accounting and Real-Time Import/Export operational
systems continue to be implemented, a support team will grow and the person
appointed will be the prime contender to manage this group. If this role
interests you and you have 3/4 years relevant commercial experience, we shall
be pleased to discuss things with you in detail.

City

circa £9,500
+ generous benefitsFortran Analyst/
ProgrammerAn excellent opportunity for a FORTRAN
Analyst/Programmer, wishing to develop their analysis
skills in a key position within a leading international
Commodity Trading group.The successful applicant will possess a minimum of
three years DP experience, preferably gained within a
DEC environment using Tektronix Graphical
equipment, and be fully conversant in FORTRAN. A
knowledge of RSX-11M and/or MACRO-11 will be
considered an advantage. In order to develop statistical
systems the candidate should possess a numerate

degree or equivalent.

- * Statistical Analysis Systems
- * Development projects
- * Interactive Graphics
- * Analysis development potential

The Company is able to offer an excellent starting
salary together with generous benefits including a car
allowance and annual bonus.Please contact our London Office quoting
reference SE1/1006.Looking For More
Than A Desk Job?

and can offer:

- * Over 2 years programming including 1 year's analysis
 - * a knowledge of IBM and/or MICRO hardware plus COBOL and/or BASIC
 - * the ability to understand and effectively convey technical information
- Then contact Myriad London (ref: W1/1006) for details on these
challenging opportunities involving customer liaison, travel and technical
interest.

Based in West London

£9-12,000

Junior Programmers
to Project Leaders

to £14,000

Thames Valley

This leading Systems House requires development staff to work on a variety
of interesting projects

- * Scientific and Industrial Applications *
- * Micros to Superminis *

Ideally you will have had relevant experience, although applications are also
invited from commercial programmers requiring a more technical position.
Hardware/Service Engineers will be of interest either in an engineering
environment or for retraining.

To find out more contact Myriad in Reading. Ref: RT1/1006.

"And now we are also looking for the world's best Software Designer" Clive Sinclair

The success of Sinclair Research has been astonishing. Their ability to stretch the limits of technology has enabled them, in just three years, to become the world leader in Personal Computers. The company is determined to lead in all aspects of computer technology—from chip design, to displays and radical peripherals, through to highly innovative software.

We are searching for a pioneering software specialist with a wide spectrum of experience of conceiving and implementing high technology software developments from chip architecture through to applications, encompassing micro code, machine code, compilers, translators and high level languages. The person appointed will have an unusual blend of attributes; first and foremost he/she will have the ability to stand alongside the most creative software

designers in the world and, as a result, be the leading authority within the company on software.

If you feel that you genuinely have the ability to accept the challenge of working with some of the foremost computer engineers in the world, and have visionary ideas on software designs for the future, we must take things further. There are no constraints to this position in terms of either salary or involvement in a company committed to dominating world markets.

To apply for this position, either send a curriculum vitae to Geoffrey King, Managing Director of Cambridge Recruitment, who is advising Clive Sinclair on this appointment, or phone for an application form. Please quote reference SD/S.

TEXACO

Knightsbridge Green
London SW1

To succeed in the oil business you need to recognise the benefits of advanced technology. TEXACO uses powerful configurations of computer hardware and software in the world-wide discovery, production, refining and distribution of the most important natural product of our time. New methods of automation are continually being sought. The London installation comprises IBM 4341s running under DOS/VSE, CICS and DLI with one machine having VM/CMS. In addition, the department has access via TSO and IMS to an IBM 3033 under MVS in Germany and extensive use is made of database, on-line and network software.

The plans are to replace the 4300s with a new generation IBM 3080 series machine and transfer all systems to MVS/IMS.

Word-processing equipment is Philips 5002/3 and Data General Eclipse minis are in use for interactive scientific and technical applications. A CASE MSX II message switch processes telex messages around the world. An IBM 3750 computerised telephone exchange is installed in London and two Plessey PDX exchanges are in other locations.

LOCALISED SYSTEMS PROGRAMMERS
KNOWLEDGE TO MVS
to £13,000

The successful applicants will join a team of systems programmers supporting the existing software which includes DOS/VSE, VM/CMS, CICS, DLI, SNA, VTAM, RAMIS II, etc., and evaluating/implementing new packages for the U.K. and six other European countries. Candidates should therefore be prepared for some foreign travel. When the IBM 3080 arrives, all systems will be converted to MVS and therefore full training will be provided in the intervening period, making this an ideal opportunity for DOS Systems Programmers to expand their skills. The U.K. use of the machine in Germany is currently supported by the technical group in London.

PROGRAMMING
COBOL PROGRAMMERS
to £9,500

COBOL Programmers are needed at varying levels of seniority with a minimum requirement of two years IBM experience on either OS or DOS systems. Knowledge of structured programming techniques, IMS databases or CICS would be a distinct advantage. Successful candidates will join one of several major new projects under development and they will also assist in the support of production systems. After a period of familiarisation, the senior positions also offer responsibility of leading a small programming team.

ANALYSIS
SENIOR ANALYSTS
to £13,000

With a high level of user contact, these outstanding career opportunities are available for people with four to six years previous computing experience, a solid COBOL programming background and who have moved into an analysis and design role. The persons appointed will be responsible for all aspects of major project development from specification to implementation. Previous experience of IMS and/or CICS would be a distinct advantage.

DATABASE ADMINISTRATION
to £14,000

Texaco wishes to appoint two people with experience in designing and implementing database systems and at least one must have a sound technical knowledge of either IMS or CICS/DLI. They will operate in a small team and their main activities will be:

- development and introduction of standards
- database design and implementation
- assuring security and integrity
- application development support
- performance monitoring and tuning
- education in database techniques and data dictionary

All employees are covered by a benefits package commensurate with other major oil companies (contributory pension scheme; 35 hour week, £1.85 per day LVs, etc) and their offices are located close to Knightsbridge underground station and to Hyde Park.

For further information and to arrange an early interview, please contact our consultants, Myriad Appointments, at their London office (01-353 0981).

Myriad Appointments Limited

80 Fleet Street, London EC4Y 1AA. Telephone: 01-353 0981. 24 hours
50a London Street, Reading, Berkshire RG1 4SQ Telephone: Reading (0734) 584804. 24 hours

Can you talk English and Basic?

ATARI has a need for a special person to talk to the users of their ATARI 400 and ATARI 800 Home Computers who is personable, used to consumer handling and a micro enthusiast.

To apply you will need to have 'O' levels in at least Maths and English and probably some 'A' levels. BASIC is an essential whilst ASSEMBLER would definitely be a plus. You will be able to differentiate between hardware/software/user problems and clearly communicate the answers to customers, both face to face and on the telephone. Some travel and exhibition work will be necessary so you must have a full driving licence.

ATARI International is part of Warner Communications Inc., the world leaders in programmable video games and is expanding its operations in the UK from a base in Wembley. Quality, teamwork and innovation is the basis of our success. This is a real career opportunity for an ambitious young man or woman who is flexible and analytic in approach to a very fast changing business environment. Salary will be c.£7,000 plus generous fringe benefits.

If you match our specification write with full career details to: David Konrad, Atari International (UK) Inc., PO Box 59, Alpertown Lane, Wembley, Middlesex, HA0 1EJ.

ATARI

JOIN THE GROWING WORLD OF

Our Information Systems business is growing rapidly. We require professional software staff at all levels: Senior Designers, Project Leaders, Team Leaders, Programmers.

Informal Interviews

will be held at our Camberley Office (adjacent to Camberley Railway Station) from 17.30 - 21.00 hours on

Tuesday 15th June 1982

Salaries from £7,500 - £16,000 p.a. with usual benefits.

The two project main areas are:

1. TANDEM NON-STOP FINANCIAL SYSTEMS

Requiring people with real-time and communications experience and preferably with Tandem experience. There is also an opening for a senior person with IBM communications experience CICS, IMS, SNA.

2. VIDEOTEK SYSTEMS

Requiring real-time mini-micro and communications experience including X25 and either VAX/PDP11, GEC4000 or Tandem and 16 bit microprocessors.

Opportunities also exist for work in Europe and North America.

We also have a continuing requirement for programmers and software engineers in our Defence and Industrial areas of business.

If you want a challenging and stimulating job and your experience matches the requirement, our senior staff will be pleased to meet you for a drink and informal chat about your career prospects with Systems Designers Limited.

If you cannot attend but the prospects interest you, please contact Margaret Brown for information on Fleet (02514) 22161 or write to her at:

Systems House, 105 Fleet Road, Fleet, Hampshire GU13 5NZ

David Grove Associates Bank Personnel Recruitment

DEC PDP SYSTEMS PEOPLE ARE YOU MOBILE - INTERESTED IN BANKING?

International Bank requires Programmers and Programmer/Analysts who are willing if necessary to relocate outside London.

Candidates must have a minimum of 3 years programming experience on mini-computers, preferably DEC PDP, programming in AIMS, BASIC+ and/or COBOL. For the Programmer/Analyst positions, practical analysis and design experience is essential, and some knowledge of staff supervision gained in a financial environment.

Applicants should also be prepared to travel throughout both the United Kingdom and Overseas.

INTERNATIONAL BANK JUNIOR PROGRAMMER/ ANALYST

c. £9,000

Prestigious City-based Bank seeks a Programmer/Analyst aged approximately 25 and with previous NCR & COBOL programming experience. Ideally the candidate will have gained his knowledge of Data Processing in banking, or financial applications.

For this post the candidate will need to be a conscientious and enthusiastic worker.

We have many more Data Processing vacancies both at senior and junior level, therefore, for more information about the above appointments and others, please contact BEVERLY COLLINS ON 01-236 7961.

David Grove Associates

60 Cheapside London EC2V 6AX
Tel: 01-236 7961

Software Research and Development

We are still growing fast. Our product development plans for the late 1980s call for software designers, particularly with structured-design experience.

We are at the forefront of product development in the field of networking, advanced communications, transaction processing, database, information processing, software technology and system recovery techniques.

We would be pleased to hear from the following experienced people:

SENIOR SYSTEMS PROGRAMMERS and SYSTEMS PROGRAMMERS
c. £9,500-£11,800 p.a. 3-5 years experience.
ASSOCIATE PROGRAMMERS
c. £7,800 p.a. 1-3 years experience.

These are all first-rate opportunities, not only for those wishing to expand their wings and take responsibility, but also for those who want to work in an environment that rewards skill, effort and achievement.

Free BUPA, generous relocation, pension scheme, free life assurance and preferential company stock purchase plan are all part of our comprehensive package.

If you have experience of a mini or mainframe system environment and are looking for career advancement, contact Debbie Teague on 0234 65121 or write to her at Prime Computer, Research Development and Engineering, The Merton Centre, St Peter's Street, Bedford MK40 2PN.

PRIME Computer

BURROUGHS SENIOR COBOL PROGRAMMER

WINDSOR £ NEG + CAR

An experienced programmer is required to join our young software house in Windsor to contribute positively towards the development of new commercial systems and the expansion of existing products.

The successful candidate should have at least 4 years' commercial programming experience preferably on BURROUGHS CMS range of machines (B50, B600, B1900).

He or she must be experienced in liaising directly with customers (often non-computer staff) and be capable of managing a small team of programmers.

For further information, write to Mr. T. Forster, Universal CMS, Victoria House, Albany Road, Old Windsor, Berkshire.

Or telephone Windsor (07536) 84887 for further details.

FIELD ENGINEERING

MINIS - London, Herts, Birmingham, Manchester
+ O/T + B/S.

Quoted in recent trade press as being the most successful to appear during the last ten years, Fabulous growth, exciting growth, train in U.S. - Paris.

MINIS - London, Surrey, Essex, A.

Gross of 600% per annum and still rising due to enthusiastic engineers unrivalled career opportunities.

Manufacture. If you are seeking a stimulating environment which to grow call Keith Wallis.

On: 01-543 4844

ALLTRONICS PEOPLE

Comms. Consultant

Herts. c. £16K + car

You will be a proven expert in this specialist field. Your task will be to advise and assist on communications software systems. Experience should cover network planning, high and low level protocols, message and packet switching (X.25) and design of data comms. software. Type of machine not important. Candidates will be mobile and presentable. Contact Terry Harvey.

Programmers CIS-COBOL

Berks. to £9,000

A highly professional company offering total micro based business solutions is seeking bright programmers. Ideally you will have worked in a CIS-COBOL, CPM environment on commercial applications. Above average candidates with knowledge of Basic may also apply. These are first class opportunities to join a prestigious company at the forefront of the micro market. Contact Tim Bridges.

Micro Graphics S/W & H/W Engs

Herts. c. £8,500

These are technically challenging positions in an attractive growth area of computing. The S/W person will work in-house on specials. Furtran, Pascal, CPM, 8086 assembler and DEC experience desirable. The H/W person will work on a mixture of in-house specials and customer support. TTL, micro and peripheral knowledge required. Excellent prospects for developing your career. Contact Terry Harvey.

Systems Consultant

Berks. base to £12K + car

A market leader in systems software is seeking a consultant to service a client base of 15-20 in S. England. Database experience, preferably CICS and ENVRON/1 and solid commercial applications background required. Dealing with IBM systems you will act within a post sales capacity giving advice, guidance and lectures to customers. Presentation is therefore important. Contact Tim Bridges.

Open letter to technical and commercial job seekers at all levels:

Recruitment Consultant

Amersham £ Basic + Commission

Our successful formula of experience, attitude and responsiveness aimed at providing the best possible service to clients and candidates alike has created the need for another consultant to join our team. Ideally you should have computer industry experience. You will be bright and ambitious with a friendly, gregarious nature.

Your success and our continued good reputation will follow from genuine care in responding to clients' and candidates' needs. The hard sell is not our style. You will be given every encouragement to develop your own campaigns, to try new ideas and to apply initiative in building personal contact with your clients.

The work is hard but satisfying. The rewards are high for successful people. If your style of operation appeals to you, please contact Terry Harvey anytime in complete confidence.

DEC Prog/Analysts

Beds. to £11,000

The working environment, the company and its products all rate A.I. with this client. Experienced RSK11/Macro 11 programmers will enjoy working on applications and systems for computer controlled analysis and measuring instruments. There are opportunities in special systems and standard product development. A physics degree would be useful. Some international travel. Contact Terry Harvey.

Analyst Twin ICL

Swindon £8,500

Our client is a subsidiary of a national retailing organisation and household name. Preferably of degree standard you will have had 2-3 years commercial analysis experience and will work on the development and maintenance of interesting applications. Non-contributory pension scheme. Flexible working and 4 weeks holiday are just some of the 'large company' benefits offered. Contact Tim Bridges.

Micro Dev H/W & S/W Engs

Berks. £7.5K to £11.5K

Our client is extremely successful in the manufacturing and supply of intelligent communications terminals. The existing development group is being expanded to provide product enhancement and innovation. Ideally candidates will have a mix of hardware and software skills, preferably gained on Z80 or 8080 micros. Bias may be to S/W or H/W. Successful company benefits. Contact Terry Harvey.

Development Manager from

H. Counties £17.5K + car

This is a rare opportunity to join a major company in a senior technical management position. 35 yrs. +, candidates must be capable of managing large numbers of technical people through an existing management team. Experience will include software and hardware development, budgeting and project control. Candidates will liaise with senior managers in other parts of the company. Contact Terry Harvey.

Team Leaders HP3000 Fortran

London c. £10,500

Experienced team leaders are required by our client to lead small teams developing sophisticated enhancements to manufacturing systems for their customers. Ideally a graduate you will have two years experience on the development of mini based interactive commercial systems. Substantial career development potential is offered by this large international organisation. Contact Tim Bridges.

Technical Support S/W

W. Herts. to £12,500

Take this opportunity to join one of the most successful computer companies of our time. You will need several years technical software experience to include real time, data communications and/or database systems. Analysts with banking or financial systems experience would also be of interest. You cannot fail to be impressed by this client. High salary but no car for City office location. Contact Terry Harvey.

Systems S/W Development

Beds. £9K to £12K

A major microcomputer manufacturer is seeking additional software staff to work on a range of development projects. We would like to hear from graduate level programmers who are interested in operating systems, compilers, systems, networking, data management, etc. There is scope for long term career development and wide job interest. Refer where applicable. Contact Terry Harvey.

Micro Opportunities

Bucks. truly £ neg.

A highly successful and established company is moving into the commercial micro business market. A ground floor opportunity exists to evaluate, develop and support hardware software in this area. The product range will include PET, APPLE, SIRIUS and CILDER. If you have a solid micro background in commercial systems and obvious flair, this is a golden opportunity. Contact Tim Bridges.

DEC/Motorola Automation

Herts. c. £9,000

There are attractive openings for software and hardware designers to work in advanced process control and automation systems for a wide range of industrial applications. The company develops systems based on PDP11 minis and Motorola micros including their own operating systems software. Real time experience in comms., data acquisition or military systems useful. Excellent benefits. Contact Terry Harvey.

Programmers Pascal/Assr

Berks. to £10,000

Our client is a very well known manufacturer and market leader in word/information and data processing systems. Programmers with 2-3 years experience are required to work on the development of systems and application software. Assembler and/or Pascal experience is essential and a good working knowledge of communication oriented systems is desirable. Contact Tim Bridges.

Applied Communications Inc., a US Corporation with offices located throughout the USA, is a major Systems House specialising in on-line systems on Tandem Non Stop Computers. ACI has installed more than forty sophisticated switched networks with a significant proportion in the financial sector. The UK subsidiary is expanding its Customer Services Division which specialises in supplying designers, applications programmers and system support staff and facilities to a wide range of advanced users. Specific assignments are:

Systems Designers

c £12000

We require Systems Designers to work on the specification design and implementation of large on-line transaction processing systems based on Tandem equipment. These are resilient, non stop developments. Applicants should have at least 4 years experience, with a minimum of 2 years spent in a design role. Preference will be given to candidates who are well qualified in the field of interactive systems development.

Software Engineers

c £12000

These appointments are for Software Support Staff who provide Tandem system expertise to clients, including performance analysis, system tuning, capacity planning and the development of operational procedures. Some pre-sales support involvement can be anticipated. Previous experience should include at least 4 years in a systems environment preferably in the area of software support. Knowledge of interactive database applications or communications systems is desirable.

Cobol Programmers

c £10 000

Our programmers provide program design and development experience to a wide variety of clients. These positions involve the development of on-line applications in the Tandem non stop environment. A minimum of 2 years experience of application development in COBOL is required. Familiarity with interactive database systems and/or banking and financial systems would be a distinct advantage.

Most appointments involve travel to client sites which are generally in the City, although flexibility to work throughout the UK and the US will be an important consideration. All salaries are negotiable as the Company is prepared to provide remuneration in line with ability and experience. Full training on Tandem Systems will be provided and there will be opportunities to work in other areas of this rapidly expanding Company.

To discuss your future career with Applied Communications, telephone Alan Moxon or Chris Peet on 01-423 2131. During out of office hours (evenings or weekends) telephone Alan Moxon Whipsnade (0582) 873106 or Chris Peet Walton-on-Thames (09322) 22644 or write to

Sales Executives In Software Products

London to £20,000 on quota

A leading International Software Company is expanding its current sales team to meet the demands of the fast-growing software market. The company develops and markets high quality products which have already gained an excellent reputation. They now require people with flair and ambition to contribute to the further success of these products.

If you have a proven record of selling sophisticated software in competitive markets, or have in-depth experience of database systems and the drive necessary to be successful in selling, then here are opportunities you cannot afford to miss.

For a Sales Executive who can achieve sales to quota, the rewards with this company are considerable. Extensive product training will be given.

Apply in confidence to Terry Horsey by sending personal and career details, or contact him for an application form, evenings Gt. Missenden (02406) 4705 or daytime as below.

London W1V 9PB
Telephone 01-439 8985

ANALYST/PROGRAMMERS**MIDDLESEX COBOL/BASIC TO £12,000**

Opportunities have arisen within an extremely successful software house based in Wembley for a number of analyst/programmers to supplement their existing teams. The candidates required will currently hold senior Programmer positions with some analysis responsibility or be Analyst/Programmers with at least two years' analysis experience in a commercial/financial environment, preferably working with Prime, Dec or Hewlett Packard equipment. Good career prospects and company package can be expected. RM5919

IBM COBOL or PL1 PROGRAMMERS**SURREY £10,000 + MORTGAGE**

This large International company seeks to recruit several Programmers as part of their expansion plans. Applicants should have a minimum of 18 months' IBM COBOL or PL1 preferably with DATABASE experience although training will be offered. The company retains IBM 4300 machines and can offer applicants a wide variety of projects. Career progression is envisaged into Analysis. Company gives an excellent Benefit Package including Subsidised Mortgage. REF: S.6260

IBM ASSEMBLER PROGRAMMERS**LONDON/H. COUNTIES TO £14,000**

We have at present been retained on behalf of many clients throughout London and the Home Counties to recruit IBM Assembler Programmers with a minimum of 18 months' experience. If you are looking for applications or Systems Programming work we can help you. Several of these positions offer excellent scope for development including training on CICS and DATABASE. Some companies offer training in Systems Programming with minimum of 2 years' commercial Assembler experience. Whatever your level of experience please now for further details. REF: SGEN 1

IBM COBOL CICS PROGRAMMERS**CITY TO £11,000 + MORTGAGE**

We have been retained by a prestigious International Bank to recruit two Programmers or Analyst Programmers to work on a variety of projects including Foreign Exchange. Candidates should be able to demonstrate a good understanding of CICS, a minimum of 6 months' experience would be sufficient. These positions offer a very good opportunity to work on large development projects. TRAINING IN DATABASE and an excellent company benefit package. If you have at least one year's Cobol ring now for further details. REF: S.6213

PROGRAMMER ANALYSTS**SURREY IBM SYSTEM 34/38 TO £10,500**

Datascene are looking for Programmers wishing to develop their analytical skills. Opportunities exist at two locations in North Surrey. Both of these companies are about to install system 38 equipment and after conversion are embarking on development projects fully utilising the facilities offered by the System 38. Ideally you will have upwards of 18 months' experience in either RPG II or RPG III. In return for your skills both companies are offering a high career development curve. For further details ring Datascene quoting REF: M.

RPG II RPG III**LONDON/H. COUNTIES IBM 34-38 £7,500-£14,000**

In London and the Home Counties alone there are upwards of 45 requirements for Programmers, Programmer/Analysts and experienced Analyst/Programmers. All these positions revolve around systems 34 or 38 hardware. Companies include Banking, Petrochemical, Insurance, Stockbroking, Commodity dealing and manufacturing. If your present position seems a little "average" and your ability and wallet require replenishing then give Datascene a call because if you do it's quite likely your career will take an upward turn. Technical automation jobs in Holland

BSO/Automation Technology is a software house engaged mainly in the fields of real-time process control and monitoring systems, satellite simulation, data communications, computer networks, distributed systems, computer graphics and compiler construction. Our clients range from large international organizations such as the European space agency to small companies using micro-processors for the first time. Our work consists of projects (both in-house and on clients premises) and technical and managerial consultancy.

BSO/AT has 50 employees half of whom are English, including several managers, and is part of the BSO-group (270 employees). Vacancies range from:

programmer to systems designer
(to £ 12,000 and car) (to £ 15,000 and car)

We are looking for people with 2 to 7 years experience in the design and implementation of real-time industrial or scientific systems on minicomputer or microprocessor systems. Preference will be given to applicants with a good knowledge of one or more assembler languages and at least one of the following high level languages: Pascal, RTL/2, Coral 66, PL/M, Fortran. Applicants who can also show in-depth experience of a structured programming methodology will also be given preference.

Applications plus CV as well as requests for information can be directed to our UK-representative, Yvonne Weddell, address: BSO/UK, P.O. Box nr. 5, Oxled RH8 0UG, Surrey, telephone Oxled (08833) 6253 (day and evening). Our first interviews will be in London on July 8 and 9. The contact person in Holland is Robbert J. Schalkkamp.

Postbus 8348, 3503 RH Utrecht, tel. 010 - 31 30 711911.

EUROPEAN SYSTEMS CO-ORDINATOR

To join the small European management team of an E.E.C. group of compact, profitable companies.

A significant contribution to the continued growth is the provision of comprehensive and timely data processing support to our operations and manufacturing facilities.

Specific experience of IBM 34 and MAAPICS is essential with ideally a background in systems and programming using RPGII. The willingness to get involved in the detail including programming as well as planning future requirements is paramount. Age 28-35.

The attractive package includes profit share, BUPA and, if necessary, relocation to Paterborough.

Please write in confidence with full CV to:

Michael R. Hindmarsh
Director of Finance and Administration
Acco European Headquarters, Bratton Way
Bretton, Peterborough PE3 8YE
WORLD LEADER IN OFFICE PRODUCTS

MANAGING DIRECTOR

BDS, a leading supplier of computer peripherals specialising in printer systems, have a vacancy for a Managing Director of Corporate Operations to accelerate growth within the U.K. and Western Europe.

The candidate must be able to demonstrate a successful marketing background with total responsibility for full financial control.

Excellent salary and usual fringe benefits will apply.

Please write with c.v. to:

Personnel Manager
BDS COMPUTER (UK) LTD.
125 Highgrove Street
Reading, RG1 5EN
to arrive by June 24

Do you want to help create an advanced database with the latest IBM hardware?

Consider:

- Varied, interesting development work embracing many different disciplines and applications. ☒
- Integration of a number of systems within a common, large-scale database under IMS DB/DC. ☒
- On-line COBOL program development in a carefully-managed operational environment. ☒
- Real career advancement in an expanding D.P. Centre, with prospects for international travel. ☒
- Excellent remuneration featuring high salaries, non-contributory pension, paid overtime, bonus, profit-sharing. ☒
- Generous relocation package including cheap mortgage, applying to both men and women, of course. ☒
- Superb location on a picturesque part of the South Coast near the New Forest and Hardy country. ☒

Consider your current position against the checklist above, and you'll be lucky to score 4 out of 7. You could do better.

Barclays Bank International are recruiting high-calibre analysts, programmers and operations analysts for their D. P. Centre - the hub of their 2000 offices worldwide - located at Poole, Dorset.

Analysts & Programmers, to £15k.

Systems Analysts should have at least 4 years experience, ideally relating to general banking/foreign exchange applications within a large scale IBM environment under IMS. A programming background would be advantageous. Those with experience in a DBA role utilising IMS Data Dictionary would be considered for correspondingly responsible positions. Programmers should have at least 3 years experience of on-line COBOL programming in an IBM mainframe environment, preferably with some knowledge of IMS or other large-scale databases.

Operations Support, to £11k.

The Operations Support department has attracted talented technicians from a broad D.P. background, and provides a stimulating environment with real career progression. An IMS Operations Analyst is required, with 2 years experience of implementation support for IMS applications, knowledge of MVS JCL, IMS batch and BMP JCL, BMP recovery and restart procedures, and preferably an understanding of DBRC and IMS batch utilities. Acceptance Test Operations Analysts are required to join the team which ensures that work submitted is controlled and tested so as to protect the live system environment. 2 years analysis experience, not necessarily in operations, is required.

Decide:

Join Barclays Bank International. For more details of these superb career opportunities, proceed as follows. Analysts & Programmers: phone Barbara Wolsky on 01-880 4013 (9.30 to 1800) or 01-328 2718 (19.30 onwards and weekends). Operations Analysts: phone Kay Stebbings on 01-838 8411 (24 hours). Alternatively, mail the coupon below. Initial interviews can be arranged in London, Birmingham, Manchester or Poole.

Mail (no stamp) to: FREEPOST, Computer People South, 27 George St., Croydon CR0 8ED.

The Challenge of Saudi Arabia the Reward of a Tax-free Salary.

In Jeddah, on Saudi Arabia's west coast, a 500-bed hospital is being commissioned. It has been built and equipped to the highest international standards, incorporating some of the most advanced medical facilities and high technology support systems available.

IHG International Hospitals Group, the British-based health care organisation managing the project, has given the task of finding these specialists to IAL.

Systems Commissioner

c. £19,000 p.a. tax-free

Your three years experience of managing hospital EDP systems will be backed by an additional two years of planning and commissioning general systems, and by an appropriate qualification.

With such a background, you should be well equipped for the task of accepting a wide range of highly specialised systems on behalf of equally specialised user groups, together with planning associated clerical procedures, including those to control access to information. Salary SR120,000 p.a. Ref. M332/01.

Operations Manager

c. £22,500 p.a. tax-free

If you have at least two years successful experience of running a busy PDP 11/70 installation, you'll be familiar with the day-to-day responsibilities inherent in this crucial role. But part of your task will be to establish an operations unit from scratch, so you should also be able to call on at least three years further experience at operator and shift leader level. Salary SR140,000 p.a. Ref. M332/02.

Senior Analyst Programmers

c. £19,000 p.a. tax-free

There is a requirement for experienced, formally qualified people to work in a number of applications areas - administration, patient care, patient management, and laboratory systems. In each case applicants should have at least five years programming experience, with at least two years in systems design. Your technical experience should include PDP 11/70's operating under RSTS/E with programs coded in BASIC PLUS. Salary SR120,000 p.a. Ref. M332/03.

Analyst Programmers

c. £15,500 p.a. tax-free

The mix of work will include enhancement and modification of existing systems in the areas of administration, patient care, patient management and laboratory systems.

Two years programming and systems design experience supported by a degree or other formal qualification, is the principal requirement. Ideally you will have worked in a PDP 11/70 installation operating under RSTS/E, and will have written most of your programs in BASIC PLUS. Salary SR95,500 p.a. Ref. M332/04.

The tax-free salaries will be paid in Saudi Riyals*. Benefits include free accommodation, 49 days annual holiday, free return flights to the UK and free medical care. Facilities include shops, gymnasium, theatre, swimming pool, tennis courts and restaurants.

Preference will be given to suitably qualified Saudi Arabian nationals and Arabic speaking personnel.

*The conversion to sterling has been effected at the rate SR 6.2 = £1.
 For further details, please send your cv to: John Callow, IAL, Aeradio House, Hayes Road, Southall, Middlesex, UB2 5NJ. Tel: 01-574 5432. Please quote the appropriate reference.

Sales Executives

**Currently Earning
 £14,000 - £25,000**

Michael Linford Associates wish to hear from Senior Sales Executives and Sales Managers whose track record to date has demonstrated superior ability.

We are an established consultancy who specialise in the search and selection of sales and marketing executives for the computer industry.

Perhaps your current appointment is fulfilling your career needs, but nevertheless, you are interested in future opportunities, alternatively, you may be actively seeking a new appointment now.

You may be looking for:

- ★ A higher income
- ★ A more sophisticated product
- ★ A totally professional peer group.
- ★ A more authoritative role

Or, more likely, a combination of all these factors, then perhaps its time you spoke to us. Bear in mind, the best position for you may never be advertised.

In the first instance, telephone Mike Linford on: **01-370 2012/2013**. Or send a brief CV for his attention to the address below. Any approach will be treated in the strictest confidence.

Chief Programmer

£9,500-£11,800 incl. of annual bonus

ILFORD Limited is the main company of the worldwide ILFORD Photographic Group, part of CIBA-GEIGY, the international chemical enterprise.

The ILFORD Group manufactures and sells black and white film and paper, the CIBACHROME range of colour products and photographic equipment and chemicals.

We are at present well advanced with a major and exciting development programme which will bring all our U.K. manufacturing operations, for the production of black and white film, paper and chemicals on to one site of Maberley in Cheshire by the end of 1983.

Investment in the restructuring project is over £30m and a total of 1400 people will be employed at the Maberley site.

The Management Services Department has a number of major challenging and interesting projects planned involving the introduction of sophisticated on-line computer systems incorporating the latest in data-processing technology. Reorganisation of the department offers this exciting opportunity for a first-class computer professional to work at Maberley with a Honeywell Level 66 machine running under GCOS using IDS1 and IDS2 databases.

Applicants, preferably graduates, must have programming project control experience on major applications. In-depth programming experience and knowledge of Database, Timesharing and Transaction Processing is required, preferably together with some previous experience in systems analysis and design.

The Chief Programmer is responsible for the supervision, training and development of programmers and a detailed knowledge of COBOL is essential.

We believe that you will find ILFORD Limited a stimulating company to work with and if you can prove yourself, we shall do our very best to offer you further challenges commensurate with your skills and abilities. Male or female candidates please write with full career and personal details to: Mr. T. M. Brown, Central Personnel, ILFORD Limited, The Drive, Warley, Brentwood, ESSEX CM13 3AT.

 IN MABERLEY, CHESHIRE

Retail Systems Development

£8-£16K+ Bracknell

We need more specialists to continue development of our RETAIL & SUPERMARKET TERMINAL SYSTEMS.

Working with ICL's advanced hardware and software controller systems, and the very latest RETAIL TERMINALS & LASER SCANNING SYSTEMS, you could be part of the team that is spearheading our growth in this challenging and expanding market.

Ideally you should have at least two years experience and a proven record in at least one of these areas:

- * Terminal Systems Design & Implementation
- * Design of food or non-food retail systems
- * Microcoding utilising 6800 or 8085 microprocessors.

However if your experience does not include retail systems but you are experienced in operating systems we'd still like to talk to you.

First-class conditions of service include salaries in the range £8,000 - £16,000 (more for outstanding applicants) together with major company benefits including assistance with relocation to this particularly attractive area of the south-east and genuine career development opportunities.

For further details telephone Dave Platten on 0344 24842 or write to him at ICL, Lovelace Road, Bracknell, Berkshire, RG12 4SN. Ref. CW2134.

UK Sales Manager

c£30,000 pa · prestige car & other benefits

A unique opportunity to establish a new marketing concept in Software sales.

This is an exceptional groundfloor opportunity offering a key sales management position in a recently started business venture aiming to introduce a new concept to the Software industry. With the backing of a well known, substantial organisation a new operating division has been formed, committed to the identification, development and marketing of productivity orientated Software products throughout Europe.

Reporting to the Managing Director, Europe, your initial brief will be to formulate and implement a marketing strategy and to develop and motivate a small UK sales team. Expanded responsibilities involving other world markets, or promotion into general management could follow once you can demonstrate success.

To take advantage of this opportunity you should be in your early 30's, with a proven track record in either Software or Turnkey sales, including previous sales management and marketing experience. Knowledge of another European language would be advantageous, though not essential.

For further information telephone Peter Dudgeon on 01-953-0671, or alternatively submit a detailed Curriculum Vitae, to him at the London Office.

(Open to both male and female applicants)

Computer Maintenance Engineering in Saudi Arabia

c.£20,000 p.a. tax-free

In Jeddah, on Saudi Arabia's west coast, a 500-bed hospital is being commissioned. It has been built and equipped to the highest international standards, incorporating some of the most advanced medical facilities and high technology support systems available.

IHG International Hospitals Group, the British-based health care organisation managing the project, has given the task of finding these specialists to IAL.

The Hospital's DEC PDP 11/70 suite with its associated peripherals and other processors will be indispensable to the functioning of virtually all departments. Consequently, maintenance, both on a planned and ad-hoc basis, will be a major priority. Maintenance schedules have already been drawn up; the requirement is for a highly experienced

Electronics Engineer who can put them into practice. The high standards of work expected makes a formal qualification such as FINE or ONC essential, and your practical experience should extend over

years, five of which should have been spent in maintaining PDP 11 processors, and the widest possible range of peripherals. Salary SR 126,000 p.a.

We also have an opportunity for a Computer Service Engineer, qualified to CS/ONC level with ten years experience on PDP kit. Salary SR 97,500 p.a.

The tax-free salaries will be paid in Saudi Riyals. Benefits include free accommodation, 49 days annual holiday, free return flights to the UK and free medical care. Facilities include shops, gymnasium, theatre, swimming pool, tennis courts and restaurants.

Preference will be given to suitably qualified Saudi Arabian nationals and Arabic speaking personnel.

The conversion to sterling has been effected at the rate SR 6.2=£1.

For further details, please send your cv to John Callow, IAL, Aemdin House, Hayes Road, Southall, Middlesex UB2 5NJ. Tel: 01-574 5412. Please quote Ref: M339.

DATA PROCESSING INFORMATION SYSTEMS MANAGER

The Hymatic Engineering Company Limited, designs and manufactures high technology equipment for the aerospace and defence industries. In brand new purpose-built premises in Radditch New Town.

The Company is now seeking to employ an Information Systems Manager to control a recently installed Manufacturing and Costing System.

Applicants should be in their mid 20's/early 30's and have some experience of a Data Processing operation. Knowledge of a Honeywell Level 82/DPSM whilst helpful, is not absolutely essential.

Individuals should be capable of developing information systems and investigating business problems with Senior Management, whilst also providing User Departments with practical advice.

A Degree, or similar level of education, in a related subject is desirable.

This position carries a good salary and there is an excellent contributory pension scheme including life assurance.

Please write for an application form giving brief summary of qualifications, experience, present position and salary, to:

Personnel Officer
Hymatic Engineering Co. Ltd
Burnt Meadow Road, North Moors Mount
Radditch, Worcs. B66 9HJ

Hymatic

IIRIS is the national agency for industrial research and technology in Ireland.

ANALYST/PROGRAMMER

is required in the Computer Section which provides a service to the Institute.

The installation comprises PDP computers (Junior RT11 and RSX-11M) and a 4 MB VAX machine under VMS. The principal languages used are FORTRAN, BASIC and COBOL with a variety of packages including FMS and DATABASE.

The successful applicant will be required to maintain the operating software and provide technical support to the Institute's on-line users.

Candidates should have a degree or equivalent qualification with a minimum of four years' relevant experience.

Experience of DEC software would be an advantage.

Appointment will be at either Scientific Officer or Senior Scientific Officer level depending upon qualifications and experience.

SALARY RANGES:

Scientific Officer: IRE 7,032-IRE 10,855 per annum.

Senior Scientific Officer: IRE 11,403-IRE 14,959 per annum.

Non-contributory superannuation scheme and other benefits apply.

Application forms and further details available from:

PERSONNEL DIRECTOR,
INSTITUTE FOR INDUSTRIAL RESEARCH & STANDARDS,
BALLYMUN ROAD,
DUBLIN 9,
IRELAND.

Telephone: 01-370101. Extn. 416/417.

Computer Operator

£8,940-£8,633 pa
(including shift allowance)

(2 shifts, 7.30 a.m.-11 p.m.)

IBM 4341 - VM - DOS/VS

If you have at least 18 months' IBM operating experience and are looking for a position in an expanding installation where your efforts will be recognised, then our career graded operator post may be of interest to you.

Our machine is a 2 megabyte IBM 4341 (hopefully to be upgraded to 4MB) with 5370 FBA Cisks, tapes and printers, plus an ever increasing local and remote T.P. network.

The installation runs DOS/VS - power as a cardless system, controlled on-line through VDU's under QUOTA II, (via SHADOW II which is currently being replaced by CICS), as part of the VM - Master System.

We also use a variety of software aids and packages such as the CA - DYNAM range for file control.

Also housed in the computer room is a WANG SYSTEM (V580) with 3 x 75 mg disks and a tape drive, which is used not only for WP but also DP projects.

Starting salary will depend on experience to date and the post is open to men and women.

For further information telephone 01-883 5811 and ask for David Clark Ext 2213 or Ken Durnell Ext 2206.

Application forms, returnable within 14 days of the appearance of this advertisement, from the Controller of Financial Services, London Borough of Harrow, PO Box 21, Civic Centre, Harrow, Middlesex, HA1 2UJ, telephone 01-883 5811 Ext 2339.

A major recruitment supplement

to coincide
with a
major
computer
show

At the VUE
MANCHESTER
June 22-24 1982

To coincide with Compex North the June 22nd Computer Weekly will contain a special recruitment supplement. Editorial will cover the computer market in the Midlands, North of England and Yorkshire. The supplement will be relevant and authoritative and will contain a wide range of subjects linked to the job market in these areas. The issue will be distributed in the normal way to Computer Weekly readers throughout Britain, and also be available to visitors from the computer show at Compex North.

This issue is perfect for recruitment advertisers - the editorial environment is right, the target audience is captive, and as Computer Weekly has a total circulation of over 100,000 copies every week, advertisers can be sure their advertisements will be read.

To the sure of your space reservation, please nearest Computer Weekly classified office in London: 011 691 0121.
Manchester: 061 872 8861
Birmingham: 021 355 4828.

A New Development Team

Networks

Hertfordshire
Principal Consultant/Designer £ Negotiable
Senior Team Leaders/Consultants to £15,000

Senior Programmers to £12,000
Programmers to £9,000

Our client is embarking on the development of one of the largest multiple node networks of computer communications systems in Europe. Being a large, successful manufacturing company they have the facilities and credibility to handle a project of this size. Early study and planning phases are initiated but the main design and implementation teams will be newly recruited.

The candidate for this position will probably be a national figure. You will have considerable experience and knowledge of communications and networking at a state-of-the-art level and be capable of representing the company at international meetings.

Senior Team Leaders/Consultants will have several years systems software implementation experience, typically at operating systems level on minis and micros. They are expected to have a good appreciation of hardware architecture. Experience of communications systems would be advantageous.

Senior Programmers & Programmers will have two or more years experience of systems software implementation or technical applications development on minis or micros. Essentially they will be bright people who will be attracted by the scope and challenge offered by a project of this magnitude.

Usual successful company benefits including relocation assistance where appropriate.

Apply in confidence to Terry Hurvey by sending personal and career details, or contact him for an application form, evenings 61. Missenden (02416) 4705 or daytime as below.

ADVISORY PROGRAMMER

Applications are invited from graduates for this post in the Computer Unit, the Advisory Programmer services. The Unit is available locally and within the University of London, and gives programming advice to students. The main service is provided by a local Digital VAX 11/750 and by the University of London Computer Centre (CCC) and/or Cray. Much use is also made of microcomputers. Main languages are FORTRAN and BASIC. Knowledge of PASCAL and ALGOL-68 would be useful. Initial appointment will be in Grade 18 or on the first four points of Grade 1A. Current salary £5,287-£7,201 depending on qualifications and experience. Appointment is required as soon as possible though the possibility of appointing a person existing in this summer is not excluded.

Further details and application form from College Secretary, Queen Elizabeth College, Campden, Road, Kensington, London, W8 5AH. Tel: 01-837 5411 ext. 205. (0870)

COMMUNICATIONS PROCESS CONTROL VIEWDATA

Modular Computer Services has been extremely successful in supplying high performance, highly reliable computer systems to the above market places.

Our Marketing Division provides our sales force with comprehensive technical support and we are now seeking the following key individual who will assist us in maintaining our current high level of achievement.

Technical Marketing Analyst c. £11,500 on goals and Company Car

This is a demanding pre-sale role which will involve the successful candidate giving presentations, running benchmarks, configuring systems and providing technical solutions to customer problems. Ideally we are looking for an individual with these skills but we would be willing to train an applicant with a suitable software background. A programmer with drive and an outgoing personality looking for a move into a sales environment would find this an excellent career opportunity.

Other attractive Company benefits are a non-contributory pension scheme, free life assurance and free BUPA.

For further details and SUB HAMPSON on WOKINGHAM 788711 or write to MODCOMP, MOLLY MILLARS LANE, WOKINGHAM, BERKSHIRE.

MODCOMP

Mature Senior Analysts

Business Analysis/Project Leadership

Central Herts Five Figure Salary

(Relocation Assistance Available)

Substantial database and on-line systems development plans have created the need to recruit two systems professionals to augment an expanding project team environment.

As Project Leader or senior member of the team, you will be afforded total project involvement assuming responsibility for the investigation, proposal, justification, specification, development and implementation of systems to meet our user requirements.

We would expect that candidates possess a sound data processing background of which probably no less than five years have been spent as a Systems Analyst. Moreover, you should be confident in your ability to liaise effectively with all levels of both user and computing orientated employees.

Our requirement to recruit is immediate: our ability to respond to the execution of current plans is vital - your experience could provide the missing link.

For immediate reaction as to your suitability, contact Andrew Carter and Rex Ashcroft on 01-935 0671 (24-hour answering service) or submit a detailed curriculum vitae to the London office.

MANAGEMENT INFORMATION SYSTEMS MANAGER

Salary negotiable in the range £12.5 to £14.5K
Company car provided plus excellent benefits package

Based: West London
Environment: IBM 4331, DOS/VSE, CICS, DL1, COBOL

We have been retained by our client to recruit a Manager who will assist them in the ongoing development and running of their Data Processing facilities.

The job will involve the following duties:

- ★ Project management and control.
- ★ Appraisal of packaged applications software.
- ★ Technical involvement in the operations sphere.
- ★ General budgeting, administration and man management of a small DP Department.

The position will necessitate travel to both the USA and the Far East from time to time.

Ideally candidates should have a good technical knowledge of IBM equipment and the ability to liaise successfully with all levels of management.

For further detailed information concerning this position please contact Chris Morrow on 01-837 0451 or alternatively send your C.V. to the address below for consideration. Please quote reference number RC10.

SYSTEMS TECHNICAL MANAGER

Good Project Leading and ICL experience

From £12,000 per annum Surrey/ants

Our client, a major distribution company, part of a multi-national organisation, wish to appoint a computer professional to the position of Systems Technical Manager.

The Position
Reporting to the Data Processing Manager, the successful candidate will be responsible for control of the development team, and provision of Systems and Programming services within the Company.

The Requirement
Applicants will essentially be considered for their proven project management experience and leadership qualities. Strong COBOL programming background is vital and preference will be given for previous ICL experience (ideally VME) and a distribution background.

The Opportunity
An ideal opportunity for a Project Leader to move up the management ladder and grow with a rapidly expanding and dynamic company.

The Contact
For more detailed information and an immediate interview - telephone Peter Jazeph on Camberley (0276) 84262 during working hours, or evenings and weekends on Guildford 76511.

Alternatively, write enclosing a detailed C.V.

TRIDENT COMPUTER SERVICES PLC
Trident Computer Services PLC,

(1828)

We need...

Team Leaders-£11.5k, Analyst-Programmers-£10.5k, and Programmers-£8.5k.

Our client is a household name company manufacturing consumer durable products for the UK and European markets. They are part of a major British industrial group, and in their thirty years of existence have become market leaders in their industry.

They are on the point of moving their computer department to brand new accommodation at their factory in South Hantsfordshire. The current installation is an ICL 2950 running under DME 2 with programming in Range Cobol. Programming is all on-line using Minimac, and other software includes TPS Access, MTS enquiry and Proper financial modelling package.

Planned developments at the new site include upgrading the current hardware, the implementation of a major manufacturing and production control package and the introduction of a micro/mini based stand-alone spare parts inventory system.

The planned move will take place within the next two months and to coincide with the installation of the computer at the new site, our clients urgently need to recruit six people in the following positions:

- 2 Team Leaders, with at least five years in DP and experience of analysis and programming in a similar technical environment.
- 2 Analyst/Programmers, with at least 3 years in DP and sound ICL 1900/2900 DME Cobol.
- 2 Programmers, with at least 18 months ICL 1900/2900 DME Cobol.

All these positions carry a generous package which includes super-subsidised company car and group pension, a bonus scheme, a profit sharing scheme and a private health insurance scheme.

These positions are to be filled as soon as possible and successful applicants will commence work at the new site at the beginning of August. Initial interviews will be held in central London, so if you want to be part of a new team please contact Bob Burnett on 01-835 8411 (office to 5.00 p.m.) or 01-837 0681 (h/w/ends) or fill in and return the enclosed form to:

COMPUTER SCIENTIST

The European Molecular Biology Laboratory, a research institute founded by 10 member states and situated in Heidelberg, Germany, invites applications for a position at the EMBL Outstation at the Deutsches Elektronen-Synchrotron (DESY) in Hamburg as:

The successful candidate will provide software and hardware computer support for scientists engaged in research activities in structural biology using X-ray synchrotron radiation from the ORRIS storage ring. The support includes:

- maintenance of systems software for POP 11/45 and POP 11/24 running under RSX 11/M
- maintenance and development of CAMAC data acquisition systems
- maintenance and improvement of software packages for the analysis of data
- design and implementation of extensions to these systems
- installation and maintenance of systems software for a VAX 11/760 with VMS systems and linking to existing machines.

The successful candidate should have appropriate qualifications and substantial experience in design and implementation of extensions to the above systems as well as maintenance and improvement of software packages for the analysis of data.

The net salary offered will be above average, in addition to which certain allowances such as family allowance, children and non-resident allowance are payable, depending on personal circumstances.

Please write briefly for an application form, quoting reference No. 82/8 to: EMBL, Personnel Section, Postfach 10 22 09, D-6800 Heidelberg.

PROJECT MANAGER

£12k - £14k p.a.

At the Royal Borough of Kensington and Chelsea we have a lively and professional D.P. department.

In addition to the financial systems found in any large organisation we have a variety of interesting work in areas such as housing, engineering and social services.

A very high standard of work is expected from all our staff who follow a structured methodology for project development.

An IBM 4341 is in use with DOS/VSE and VM. So far, seventy terminals are attached.

All current projects involve on-line development using COBOL and CICS. API and other personal computing facilities are being introduced and will run along side our more major developments.

We are seeking a project manager for one of our three development teams, whose duties will include - planning and organising work of a 5-member team through all stages of project development - undertaking major tasks within the feasibility, analysis and implementation stages

He or she should have seven years' D.P. experience and be able to demonstrate the ability to perform the above tasks.

In return, we offer a friendly working atmosphere in pleasant modern offices off Kensington High Street, excellent training facilities, generous holiday arrangements, flexitime and an active sports and social club.

For further details ring Tony Eldred on 01-937 5484 ext 662.

The Royal Borough of KENSINGTON AND CHELSEA

Application forms are obtainable by postcard only, quoting Ref. CW/844, from the Personnel Services, The Town Hall, Hornton Street, London W8 7NX. Closing date for applications 28th June, 1982. Applications are welcome from suitably qualified disabled persons.

Sales & Marketing Recruiters Ltd

What Comes After Bureau Sales?

Perhaps sales management. If you have the talent and inclination. On the other hand you could increase your experience, income and market value by working for a computer manufacturer. The days of simply "padding time" are virtually over and so the demand for people who are able to sell "Solutions" as opposed to "Tools" is increasing. Of course, the transition is not simple. First, you must have proven sales ability, then you need a well informed, credible and confident organisation that knows where your opportunities exist, plus the personal skills to protect your interests and evaluate your career potential.

There Sales and Marketing Recruiters, the industry's leading sales recruitment specialists.

Just ask any computer manufacturer! Contact Alexander Scott or Peter Hubble (01-734 9776), Roger Pyett (061-445 0648), or Alan Williams (05432 56812).

SALES BIT

Quality of management - 13

The recipe for successful sales training

AS I mentioned last week, training salespeople is not easy. They are demanding students - their enthusiasm can contribute to raising the success of a course beyond the expectation of the trainer, or can equally destroy any chances of real achievement if their interest is not stimulated and their respect earned.

The recipe for achieving a successful sales training course is not simply a matter of choosing the right topic. Equal attention must be given to other aspects of the educational process. The trainer must be:

- Fluent in his presentation. There is nothing less convincing than a hesitant trainer.
- Able to deal effectively with side-issues that may be generated by the main topic. Students expect their tutor to be well-informed on the art in general as well as the subject in hand.
- Well-provided with supporting information. "I don't know" does very little for the trainer's personal credibility.
- Supported by professionally produced visual aids. Tatty, freehand flip-chart illustrations reduce the impact and credibility of both the trainer and the subject matter and do nothing to raise the presentational standards of the students.

Professional in his attitude and delivery. Being well-informed is not all. Tutorial impact must be at least as good as might be expected of a first-class sales presentation and the importance of every topic must be stressed. If this cannot be done with absolute conviction either the trainer has got it wrong or the subject should be omitted altogether.

Aware of the need for providing students with good food and accommodation as well as a potentially stimulating social environment. If students are unhappy with their surroundings this usually has no adverse effect on their attitude towards study.

In tune with the needs of individual students as well as the class as a whole. Most salespeople are reluctant to give up precious selling time, but to do so for a tutorial that teaches them nothing is aggravating, to say the least of it. Individual student profiles can often be a great assistance in optimising the effect of training.

There are many reasons why sales organisations never get around to providing sales training, though most can be interpreted as little more than excuses. In many cases the cause is little more than a lack of time.

Next week I shall be writing about some of the day-to-day hazards of running a sales training course.

PUZZLE ANSWER

THE important thing here is to select simple terms in which to formulate the equation. One easy way is to assume that Unit of Time = time taken for one step to move out of sight at the base of the escalator, with a number of steps showing. We can then say that the first trip involves (A) 30 steps in 30 units, and the second trip 75 steps in 75 units. This comes down to (A) 1 step in

units, and (B) 1 step in 30 units. Now, since only one step is visible at any one time, the time taken for the first trip is 30 units, and the time taken for the second trip is 75 units. This comes down to (A) 1 step in

Programming Plus in the City

An opportunity for career minded programmers to enhance their skills within the development of an interesting range of in-house accounting and management information systems with one of the world's largest Financial Services firms.

Our Client offers two determined young programming professionals the opportunity to play a significant role within the development of new mini-computer based on-line systems at their London Headquarters.

These systems will support a professional staff who provide a wide range of accounting and data processing services to a prestige client base throughout the United Kingdom.

Candidates should possess an absolute minimum of two years COBOL programming experience preferably gained in a mini-computer environment, where exposure to on-line techniques and technical professionalism will have enhanced and consolidated their programming skills. A sound academic background would be desirable, although not essential, and the individual should have had experience of working closely with users during the development and implementation of accounting and management reporting systems.

The benefits the individual will gain by working for an internationally respected organisation are obvious, and successful candidates can expect remuneration and other advantages appropriate to such an opportunity.

To arrange an initial interview, please call Rex Ashcroft on 01-935-0671 during working hours, or Harlow (0279) 416529 evenings and weekends.

Salaries Negotiable to £9,000

Technical Sales & Management Appointments

Area	Location	Salary	Experience

If you want to know why we've just created 15 new Programmer jobs, Speak to the people who know.

Our Programming Section Managers are the people responsible - and they'll be talking to you direct when you phone Burroughs to hear the why and the wherefore of our 15 new appointments for Senior Programmers and Programmers.

You'll hear how the appointments have been created, as a result of our expansion plans. Why we need to take these people on board in the next six months to meet the demands of a rapidly increasing market share. How you can invest - and broaden your software expertise by joining a project team initially in one of these areas (but with exposure to other specialities as part of your career development with us):

- Operating Systems * Interpreters
- User Interfaces * Maintenance and
- Diagnostic Test Routines * Data Communications

In turn, you'll have the chance to ask all the technical questions you want about our innovative and sophisticated computer systems, terminals and automated handling equipment and to get all the facts, straight from the people who know. We'll also be pleased to give you details on salary, benefits and overseas travel opportunities: trips to the U.S.A.; home of our parent company, are a definite possibility.

Let's talk. The number is 01-686-0355. Ring us on Tuesday, 15th June or Wednesday, 16th June between 5.00pm and 9.00pm. Alternatively, if you are unable to telephone on either day, please write to: Personnel Department, Burroughs Machines Limited, 212 Ryeley Way, Croydon, Surrey, CR0 4NZ.

CONTRACTS

We urgently require skilled and experienced analysts and programmers. Below are examples of contracts starting shortly. If you are on contract or are seriously considering taking up contract work why not contact JACKIE ROBBINS now and find out about the many services Force 8 offer to their contractors, including FREE Tax Advice.

LONDON & SOUTH

*IBM	Analyst	- Insurance
	Analyst/Programmer	- CICS, PL1, IMS
	Programmer	- COBOL, CICS (Command)
*HP3000	Programmer	- COBOL
*DATA GENERAL	Programmer	- COBOL, ADS/VS, INFOS2
*B8600 & 6800	Programmer	- COBOL, DMS2, PCS+, DIS
